Mudflat Ecology Peter G. Beninger, 2019-02-13 Intertidal mudflats are distinct highly productive marine habitats which provide important ecosystem services to the land sea interface In contrast to other marine habitats and despite a large body of primary scientific literature no comprehensive synthesis exists such that the scattered knowledge base lacks an integrated conceptual framework We attempt to provide this synthesis by pulling together and contextualizing the different disciplines tools and approaches used in the study of intertidal mudflats The editor pays particular attention to relationships between the various components of the synthesis both at the conceptual and the operational levels validating these relationships through close interaction with the various authors

Biodiversity and Environmental Change Emma Burns, Andrew Lowe, Nicole Thurgate, David Lindenmayer, 2014-02-06 This data rich book demonstrates the value of existing national long term ecological research in Australia for monitoring environmental change and biodiversity Long term ecological data are critical for informing trends in biodiversity and environmental change The Terrestrial Ecosystem Research Network TERN is a major initiative of the Australian Government and one of its key areas of investment is to provide funding for a network of long term ecological research plots around Australia LTERN LTERN researchers and other authors in this book have maintained monitoring sites often for one or more decades in an array of different ecosystems across the Australian continent ranging from tropical rainforests wet eucalypt forests and alpine regions through to rangelands and deserts This book highlights some of the temporal changes in the environment that have occurred in the various systems in which dedicated field based ecologists have worked Many important trends and changes are documented and they often provide new insights that were previously poorly understood or unknown These data are precisely the kinds of data so desperately needed to better quantify the temporal trajectories in the environment in Australia By presenting trend patterns and often also the associated data the authors aim to catalyse governments and other organisations to better recognise the importance of long term data collection and monitoring as a fundamental part of ecologically effective and cost effective management of the environment and biodiversity
