One example is how it is natural for busy teachers to set only those questions that can be marked by hand in a straightforward way even though the constraints of paper based formats restrict what they do and why There are other kinds of questions such as those with non unique correct answers or where assessing the properties requires the marker themselves to undertake a significant computation It is simply not sensible for a person to set these to large groups of students when marking by hand However such questions have their place and value in provoking thought and learning This book aimed at teachers in both schools and universities explores how in certain cases different question types can be automatically assessed Case studies of existing systems have been included to illustrate this in a concrete and practical way
