Trivium in Practice Martin Robinson, 2016-06-10 *Trivium in Practice* brings together a series of case studies written by educators who were inspired by Martin Robinson s first book *Trivium 21c* Taken together these case studies reveal how regardless of setting or

sector the trivium can deliver a truly great education for our children Great teaching has the three elements of the trivium at its centre Grammar foundational knowledge and skills Dialectic questioning thinking and practising Rhetoric the ability to express oneself beautifully persuasively and articulately in any form The trivium is a helpful way for a teacher to think about the art of teaching Through the model of the trivium traditional values and progressive ideals can coexist both knowledge and cultural capital matter and skills are interwoven with content The trivium isn't a gimmick to be imposed on to a curriculum it is a tried and tested approach to education It is the key to great teaching and learning as this group of educators discovered The case studies are from Tom Sherrington Sam Gorse Nick David Hall Nigel Matthias Nick Barnsley Mike Grenier Nick Rose and Carl Hendrick These educators have found that trivium education has brought a range of tangible benefits for their students These include greater confidence enhanced development of rigorous analytical skills improved oracy and confidence in speaking in front of audiences an appreciation of the value of acquiring and applying knowledge refined skills in questioning and debating developed creativity independence and critical thinking the ability to form and express considered opinions and importantly the enjoyment of learning Fundamentally these educators have found that the trivium has helped them to define and deliver their ideas about the education they want for their students helping them to become engaged lifelong learners in the process There is no one right way to do the trivium it is a tradition that can be adapted It is the art of education and engages teachers in the art of being educators Just as each great artist learns from a tradition and refashions it adds to it disrupts it so do the teachers who have contributed to this book On their canvas in their school each contributor is creating and re-creating trivium education in their own way Discover the potential of the trivium and be inspired to do the same in your own classroom Suitable for teachers and leaders in any educational setting

What is a Mathematical Concept? Elizabeth de Freitas, Nathalie Sinclair, Alf Coles, 2017-06-22 Responding to widespread interest within cultural studies and social inquiry this book addresses the question what is a mathematical concept using a variety of vanguard theories in the humanities and posthumanities Tapping historical philosophical sociological and psychological perspectives each chapter explores the question of how mathematics comes to matter Of interest to scholars across the usual disciplinary divides this book tracks mathematics as a cultural activity drawing connections with empirical practice Unlike other books in this area it is highly interdisciplinary devoted to exploring the ontology of mathematics as it plays out in different contexts This book will appeal to scholars who are interested in particular mathematical habits creative diagramming structural mappings material agency interdisciplinary coverings that shed light on both mathematics and other disciplines Chapters are also relevant to social sciences and humanities scholars as each offers philosophical insight into mathematics and how we might live mathematically

Learning and Teaching Mathematics in The Global Village Marcel Danesi, 2016-04-29 This book provides a fundamental reassessment of mathematics education in the digital era It constitutes a new mindset of how information and knowledge are processed by introducing new interconnective and

interactive pedagogical approaches Math education is catching up on technology as courses and materials use digital sources and resources more and more The time has come to evaluate this new dynamic which transcends all previous use of ancillary devices to supplement classroom math instruction Interactivity and interconnectivity with the online world of math and math texts such as television programs and internet sites can be integrated with our traditional modes for delivery of math instruction This book looks at how this integration can unfold practically by applying these relevant pedagogical principles to elementary topics such as numeration arithmetic algebra story problems combinatorics and basic probability theory The book further exemplifies how mathematics can be connected to topics in popular culture information technologies and other such domains
