Steel Corrosion and Degradation of its Mechanical Properties Chun-Qing Li, Wei Yang, 2021-09-19 This book presents the state of the art knowledge on corrosion of steel cast iron and ductile iron with a focus on corrosion induced degradation of their mechanical properties The information presented in the book is largely derived from the most current research on the effect of corrosion on degradation of mechanical properties The book covers the basics of steel corrosion including that of cast iron and ductile iron that are not well covered in most literature Models for corrosion induced degradation of mechanical properties are presented in the book with a view to wider applications The knowledge presented in the book can be used to prevent corrosion induced failures of corrosion affected structures offering enormous benefits to the industry business society and community Key strengths of the book are that it can be employed by a variety of users for different purposes in designing and assessing corrosion affected structures and that the knowledge and techniques presented in the book can be easily applied

by users in dealing with corrosion affected structures and the uniqueness in examining the corrosion effect on degradation of various mechanical properties. With examples of practical applications the book is particularly useful for all stakeholders involved in steel manufacturing and construction including engineering students, academicians, researchers, practitioners and asset managers.

Advances in Engineering Materials, Structures and Systems: Innovations, Mechanics and Applications Alphose Zingoni, 2019-08-21. *Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications* comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019. The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures. The many topics featured in these Proceedings can be classified into six broad categories that deal with:

- i the mechanics of materials and fluids: elasticity, plasticity, flow through porous media, fluid dynamics, fracture, fatigue, damage, delamination, corrosion, bond, creep, shrinkage, etc.
- ii the mechanics of structures and systems: structural dynamics, vibration, seismic response, soil structure interaction, fluid structure interaction, response to blast and impact, response to fire, structural stability, buckling, collapse, behaviour.
- iii the numerical modelling and experimental testing of materials and structures: numerical methods, simulation techniques, multi scale modelling, computational modelling, laboratory testing, field testing, experimental measurements.
- iv innovations and special structures: nanostructures, adaptive structures, smart structures, composite structures, bio inspired structures, shell structures, membranes, space structures, lightweight structures, long span structures, tall buildings, wind turbines, etc.
- v design in traditional engineering materials: steel, concrete, steel concrete, composite, aluminium, masonry, timber, glass.
- vi the process of structural engineering: conceptualisation, planning, analysis, design, optimization, construction, assembly, manufacture, testing, maintenance, monitoring, assessment, repair, strengthening, retrofitting, decommissioning.

The SEMC 2019 Proceedings will be of interest to civil, structural, mechanical, marine and aerospace engineers. Researchers, developers, practitioners and academics in these disciplines will find them useful. Two versions of the papers are available: Short versions intended to be concise but self contained summaries of the full papers are in this printed book. The full versions of the papers are in the e book.

[Lectures on Fourier Series](#) Laszlo Solymar, 1988. This easily readable text provides an introduction to the use of Fourier series, one of the most powerful techniques ever devised for the benefit of applied scientists. The emphasis is on worked examples and step by step instruction rather than intense mathematical rigor. However, students will learn how the relationships between variables can be put in mathematical form, particularly in engineering, and how Fourier series are indispensable for describing periodic phenomena to various degrees of approximation. Based on the author's successful lecture course, the text will be a helpful guide and introduction for students in engineering, physics and chemistry.
