Food Processing Plant Frank Herbert Slade, 1967 *Concepts of Small-scale Food Processing* Donald

G Mercer, 2021-02-08 Providing detailed information on key areas of post harvest technologies this book is written with small scale processors and entrepreneurs in food processing who have no formal training in Food Science or Food Engineering in mind Uniquely it will review the hands on aspects of food processing from a largely non academic viewpoint It is written in non technical language and covers everything from the basic science of why food is processed to a description of the main methods used Coverage includes all current technologies that are used at the small scale such as why food is processed the historical development of food processing background skills heating and cooling in food processing thermal processing basics and specialised calculations drying food materials statistical manufacturing control and sugar solution calculations in beverage making The target audience for this book is vastly under served with appropriate information and the abundant use of photographs showing the various concepts described in the text makes this book appealing to those required to understand their food process operations Sustainable Horticulture in Semiarid Dry Lands Shrikant Hiwale, 2015-03-16

This book discusses ways of increasing production unit area by making full use of the soil and water under the harsh climatic conditions of semiarid areas This leads to improved sustainability increased availability of fresh produce which is vital for human health and higher incomes for small and marginal farmers Arid and semiarid areas account for almost 70 per cent of the total cropped area of India In these areas physical constraints like low and erratic rainfall high temperature high wind velocity low fertility poor soil structure salinity of soil and ground water all limit reliable crop production In the absence of any type of aggregation the soils are highly erodible lack structure and have a very coarse texture with low water holding capacity Intensive agricultural practices increasing population pressure climatic changes environmental pollution loss of biodiversity soil erosion salinization and water depletion are all threatening the sustainability of agriculture In view of the mounting demand for food it is vital to link enhanced food production with nutritional security conservation of natural resources increasing farmers incomes employment generation through agricultural diversification Horticulture particularly of fruit trees can play a major role in solving the problem of nutrition as fruits are rich source of vitamins and minerals and have antioxidant properties Fruit trees which are mostly deciduous add leaf litter to the soil and this ultimately helps to improve the condition of the soil In addition fruit trees are known to reduce soil erosion and reduce run off The trees also play a major role in purifying the environment as they are the known carbon sequesters Fruit tree cultivation is a profitable proposition There is no scope to increase the land surface all increase in productivity therefore has to be from the available land This means introducing cropping systems that can meet the basic food fodder and fuel requirement of farming families
