Charalambous, 1998-05-29 Advances in instrumentation and applied instrumental analysis methods have allowed scientists concerned with food and beverage quality labeling compliance and safety to meet ever increasing analytical demands Texts dealing with instrumental analysis alone are usually organized by the techniques without regard to applications The biannual review issue of Analytical Chemistry under the topic of Food Analysis is organized by the analyte such as N and protein carbohydrate inorganics enzymes flavor and odor color lipids and vitamins Under flavor and odor the subdivisions are not along the lines of the analyte but the matrix e.g. wine meat dairy fruit in which the analyte is being determined In Instrumentation in Food and Beverage Analysis the reader is referred to a list of 72 entries entitled Instrumentation and Instrumental Techniques among which molecular spectroscopy chromatographic and other sophisticated separations in addition to hyphenated techniques such as GC Mass spectrometry A few of the entries appear under a chapter named for the technique Most of the analytical techniques used for determination separations and sample work prior to determination are treated in the context of an analytical method for a specific analyte

in a particular food or beverage matrix with which the author has a professional familiarity dedication and authority Since in food analysis in particular it is usually the food matrix that presents the research analytical chemist involved with method development the greatest challenge
