For pharmaceuticals, recent efforts to reduce animal use in long term studies include an addendum to the International Council for Harmonisation (ICH) guideline S1B R1 that prioritizes short term studies in transgenic mice and recommends assessing the weight of evidence available to first determine whether a long term study in rats would add value. For other sectors, an expert group of the Organisation for Economic Cooperation and Development (OECD) is developing an Integrated Approach to the Testing and Assessment (IATA) of non genotoxic carcinogens based on common hallmarks of cancers and on key characteristics of carcinogens. Within current regulations, animal use could be reduced by evaluating toxicokinetics in main study animals with microsampling methods by including only one negative control group and by genotyping transgenic mice instead of using positive control groups in each study. **Hesi Study Guide** Trivium Test Prep, 2013-08 *HESI A2 Study Guide 2021-2022: HESI Admission Assessment Exam Review with Practice Test Questions [Updated for New Outline]* Matthew Lanni, 2021-06-29 APEX Test Prep's HESI A2 Study Guide 2021-2022 HESI Admission Assessment Exam Review with Practice Test Questions Updated for New Outline.
