ADEMCO 5821

Temperature Sensor & Flood Detector

INSTALLATION AND SETUP GUIDE

GENERAL INFORMATION

The ADEMCO 5821 Temperature Sensor & Flood Detector is a wireless transmitter used with Honeywell's ADEMCO alarm systems that support 5800 series devices. The 5821 can be configured to operate as a stand-alone temperature sensor and/or as either a Remote Temperature Sensor or Flood Detector. The 5821 in combination with the ADEMCO T280R temperature probe is ideal for monitoring refrigerators and freezers in restaurants, kitchens and warehouses where food storage is a concern. The 5821 in combination with the ADEMCO 470PB probe can be used to sense floods in basements and other areas where there is a possibility of flooding. The 5821 will send an alarm, via its RF transmitter, to the control when the preset temperature limit is exceeded or when a flood is detected. Temperature monitoring and flood detection is dependent on the operating mode selected. Refer to Table 1 for applicable operating modes.

Room temperature is monitored at the device using the 5821's internal sensor. Refrigerator or Freezer temperature is monitored remotely using the ADEMCO T280R temperature probe. Flood detection is monitored remotely using the ADEMCO 470PB probe with the supplied resistor. A separate 5821 is required for each external probe being used.

In refrigerator or freezer applications, when the temperature increases past the high threshold limit and a delay of greater than 30 minutes passes, an alarm is triggered. This preset delay offers greater reliability against false alarms, especially due to open refrigerator or freezer doors.

A 3-volt lithium battery powers the 5821. If the battery voltage gets too low, the 5821 sends a low battery signal to the control panel.

INSTALLING/REPLACING THE BATTERY

Important Notes:

- Use 3-volt lithium battery: Duracell DL 123A or Panasonic CR123A.
- Observe polarity.
- When replacing the battery, wait at least 30 seconds after removing the old battery, before installing the new one.

Install or replace the battery as follows:

1. Remove the transmitter's top cover by inserting the flat blade of a small screwdriver into the pry-off slot at one end of the unit (see Figure 1 for location), and slightly twisting the blade until the cover disengages.
2. Install a 3-volt lithium battery as shown in Figure 1.

TAMPER SUPERVISION

The 5821 tamper supervision feature (Loop 4) causes a trouble signal to be sent to the control if the unit's cover is removed from the base or if an external probe is used and the wire is cut (open) or the probe is shorted. The tamper switch is also used to program the unit's serial number and loop assignments to the control panel.

SETTING THE OPERATING MODE

Table 1 provides a list of the various operating modes of the 5821 with the respective Loop and DIP Switch settings for each. Note that Cold Temp Sensing can be used in combination with any of the other operating modes. To use the transmitter to monitor two different conditions, you must program each loop used on the 5821 as its own zone, and you must set the DIP Switches as shown for the combination functions in Table 1.

PROGRAMMING THE UNIT

Once you have selected an operating mode and have set the DIP Switches accordingly, you must enroll the transmitter in the control panel. When programming the transmitter in the control panel, note that you must program a separate zone for each loop you are using on the transmitter. To program:

1. Enter the control's Zone Programming mode.
2. Enter the zone number to be programmed.
3. Enter the applicable zone type when prompted (zone types such as 24-Hr. Aux, Waterflow, etc. should be used) depending on the function of the zone and the control panel being used (see the control panel's instructions for available zone types and definitions).
4. When prompted, enter Input Type 03 (3 on some controls) – Supervised RF Transmitter.
5. When prompted for the serial number, transmit from the detector by pressing the tamper switch.
6. When the serial number is displayed, transmit from the detector again by pressing the tamper switch. The current loop number (4) will begin to flash.
7. Manually change the loop number to the desired loop number for the zone (according to the application—see Table 1).
8. When programming for this zone is complete, program other zones for the transmitter as necessary (each loop requires its own zone).
9. Exit Programming mode when programming is complete, and test the detector. Refer to the Testing section.
