Biology and Conservation Marie A. Simovich,Clay Sassaman,Denton Belk,2013-04-17 This volume is a collection of papers concerning the biology of large branchiopod crustaceans Anostraca Conchostraca and Notostraca Many of the individual papers were first presented at the Third International Large Branchiopod Symposium ILBS 3 held at the University of San Diego CA USA July 15 18 1996 Contributions on additional topics from participants at the symposium and from colleagues not able to join us in San Diego are also included In addition there is a supplement to the 1995 Checklist of the Anostraca The theme of the ILBS 3 was understanding and conserving large branchiopod diversity Researchers from around the world presented papers on a variety of topics related to conservation of large branchiopods with contributions ranging from alpha taxonomy and zoogeography to community structure and studies of ecology and evolution One important issue developed in many of the papers in this volume is the need to advance our understanding of basic aspects of branchiopod biology

throughout the world in order to enhance our efforts to conserve them Although we have made important strides in understanding the biology of large branchiopods we have with few notable exceptions made little progress in assuring the conservation of their diversity We hope this volume will supply the reader with new ideas and generate enthusiasm for research and public education efforts on behalf of branchiopod conservation

Methods in Mammary Gland Biology and Breast Cancer Research Margot M. Ip, Bonnie B. Asch, 2012-12-06 approaches to the experimental problems that still face us in understanding this most fascinating of organs Too many people contributed to the completion of this volume to allow acknowledgment of all the individual efforts but we particularly thank the reviewers whose input into the editorial process was invaluable and the authors of these chapters who revised their text sometimes more than once to bring it to the high standards set by the Editors The Committee gratefully acknowledges the support of Vysis Inc in the publication of a color figure in Chapter 19 by S Weber Hall and Trevor Dale Finally we wish to express our heartfelt appreciation to Margot Ip and Bonnie Asch who worked long and hard to bring this volume to fruition Margaret C Neville for the Committee on Mammary Gland Biology Preface One of the most exciting and beneficial developments in research on mammary gland biology and breast cancer has been the influx of increased funding to support this work This influx which has been due primarily to the tireless efforts of breast cancer activists to garner additional money from various federal and state sources has led to a rapid expansion of research efforts by attracting numerous new investigators into the field These new investigators include students postdoctoral fellows and scientists from other fields

RNA-Protein Interaction Protocols Susan R. Haynes, 2008-02-03 The molecular characterization of RNA and its interactions with proteins is an important and exciting area of current research Organisms utilize a variety of RNA protein interactions to regulate the expression of their genes This is particularly true for eukaryotes since newly synthesized messenger RNA must be extensively modified and transported to the cytoplasm before it can be used for protein synthesis The realization that posttranscriptional processes are

critical components of gene regulation has sparked an explosion of interest in both stable ribonucleoprotein RNP complexes and transient RNA protein interactions RNA is conformationally flexible and can adopt complex structures that provide diverse surfaces for interactions with proteins The fact that short RNA molecules aptamers see Chapter 16 can be selected to bind many different types of molecules is evidence of the structural variability of RNA RNA molecules are rarely entirely single or double stranded but usually contain multiple short duplexes interrupted by single stranded loops and bulges in some RNAs such as tRNAs the short duplexes stack on each other Further variability is generated by the presence of non Watson Crick base pairs modified nucleotides and more complex structures such as pseudoknots and triple strand interactions *Protein & Peptide Letters* ,1997-02 Cell and Muscle Motility Robert M. Dowben, Jerry W. Shay, 2012-12-06 The contributions to this volume were presented at a Symposium entitled Current Topics in Muscle and Nonmuscle Motility held in Dallas 19 21 November 1980 under the auspices of the A Webb Roberts Center for Continuing Education Baylor University Medical Center Dallas and the University of Texas Health Science Center at Dallas This very useful opportunity for a group of active investigators in motility to meet and discuss their latest findings was made possible in part by the income from an endowment fund established by a generous gift from Dr Albert P D Errico in the Baylor University Medical Center Dr D Errico was the first formally trained neurosurgeon to practice in the Dallas area the first Chief of Neurological Surgery and a member of the Medical Board of the Baylor University Medical Center Dallas 1947 1964 The income from this fund is used to promote the dissemination of up to date information in the Neurosciences to provide intellectual stimulation to add to the fund of knowledge and improve the skills of neurosurgeons neurologists internists and others in specialized fields of medicine We are all indebted for this generous gift that made this enriching educational experience possible We are also grateful for support the Symposium received from Electron Microscopy Sciences Forma Scientific J E O L USA Inc Ladd Research Industries M J O Diatome Co Organon Co Upjohn Co G D Searle Co and Smith Kline and French Robert M
