

# Meiosis

How does sexual reproduction lead to genetic variation?

KEY

## Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth and repair. Sexually-reproducing organisms have a second form of cell division that produces reproductive cells with half the number of chromosomes. This process is called **meiosis**, and without it, humans, oak trees, beetles, and all other sexually-reproducing organisms would be vastly different than they are today.

## Model 1 – Meiosis I

1. According to Model 1, in what type of organs are the cells that enter meiosis I found?  
*Sex organs (ovaries and testes).*
2. Considering what you already know about mitosis in cells, what event must take place during interphase before a cell proceeds to division?  
*DNA replication.*
