

# Meiosis

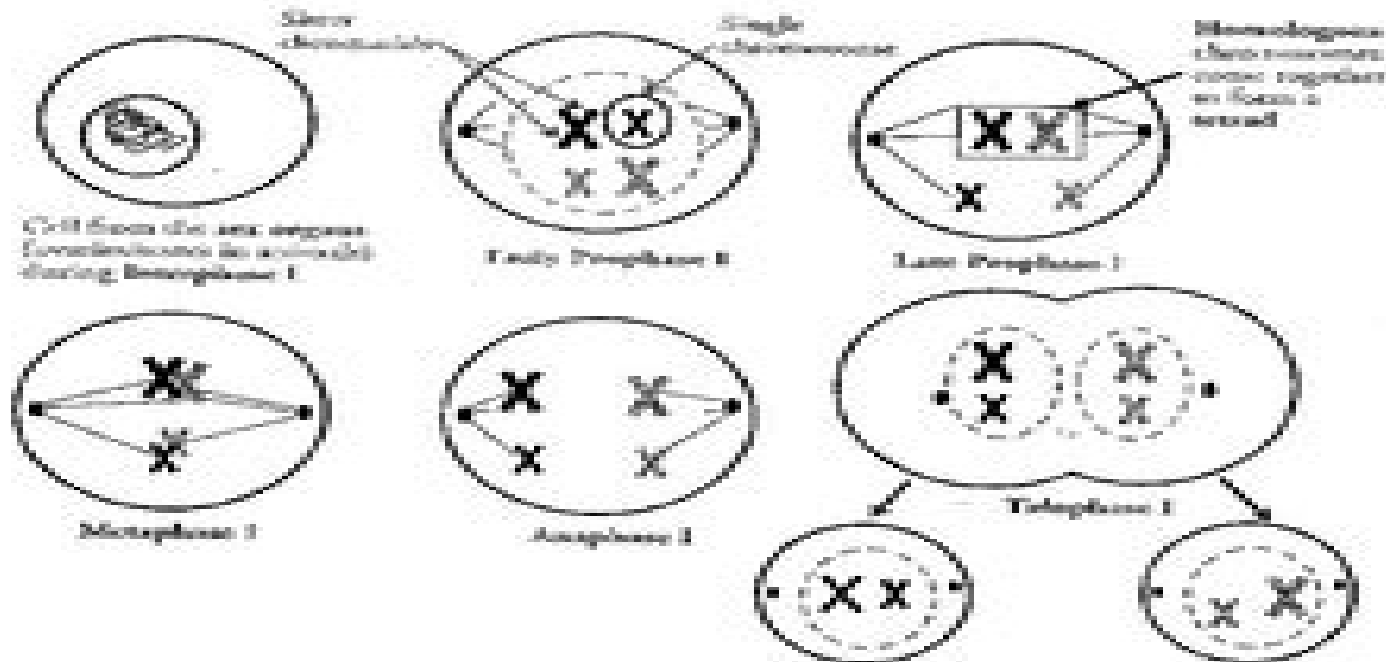

How does sexual reproduction lead to genetic variation?

KEY

## Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth and repair. Sexually-reproducing organisms have a second form of cell division that produces reproductive cells with half the number of chromosomes. This process is called *meiosis*, and without it, humans, oak trees, bacteria, and all other sexually-reproducing organisms would be very different than they are today.

## Model 1 – Meiosis I

1. According to Model 1, in what type of organism are the cells that enter meiosis I found?  
*Sex organs (ovaries and testes).*
2. Considering what you already know about animals in cells, what events must take place during Anaphase I before a cell proceeds to division?  
*DNA replication.*
