

When the switch is closed, the circuit is complete and the light bulb glows.

The battery provides the electrical energy that flows through the circuit. The light bulb converts this electrical energy into light and heat.

The switch controls the flow of electricity, allowing it to be turned on or off.

This simple circuit demonstrates the basic principles of electricity and how it can be used to power a device.

The circuit is a closed loop, meaning there is a continuous path for the electricity to flow.

The light bulb is the load in the circuit, which means it is the device that uses the electrical energy.

When the switch is open, the circuit is incomplete and the light bulb does not glow.

The battery provides the electrical energy that flows through the circuit. The light bulb converts this electrical energy into light and heat.

The switch controls the flow of electricity, allowing it to be turned on or off.

This simple circuit demonstrates the basic principles of electricity and how it can be used to power a device.
