

Problems: Problems for Exercise 2

1. Suppose a consumer is purchasing two goods, x and y , at a price that is lower than $\$1$ and with income $\$1$. Consider the following utility function

$$u(x, y) = x^{0.5} + y^{0.5}$$

$$u(x, y) = 1.5 \begin{pmatrix} x \\ y \end{pmatrix}$$

$$u(x, y) = 1.5 \begin{pmatrix} x \\ y \end{pmatrix}$$

- What consumer's best affordable bundle is affordable? Does it depend on the price of the two goods?
 - Does this utility function represent a homothetic utility as a function of the two goods? Is it a linear utility? Provide the utility representation of the consumer's best affordable bundle for each possible bundle.
 - Suppose now a consumer has a budget of $\$1$ and a utility function $u(x, y) = 1.5 \begin{pmatrix} x \\ y \end{pmatrix}$. Suppose the consumer's best affordable bundle is (x^*, y^*) . Is this bundle the best affordable bundle for a consumer with a budget of $\$1$ and a utility function $u(x, y) = 1.5 \begin{pmatrix} x \\ y \end{pmatrix}$?
2. In the following exercise, I will explain how much the consumer's utility function is affected by a change in the budget. Consider the following utility function
- Suppose the government subsidizes the purchase of good x . For example, $\$0.50$ per unit of good x is given. For each possible bundle of goods, what is the utility function for good x and the utility function for good y ?
 - Is this bundle the best affordable bundle for a consumer with a budget of $\$1$ and a utility function $u(x, y) = 1.5 \begin{pmatrix} x \\ y \end{pmatrix}$?

Cognition, Education, and Communication Technology PETER GARDENFORS,Petter Johansson,2014-04-08 Cognition Education and Communication Technology presents some of the recent theoretical developments in the cognitive and educational sciences and implications for the use of information and communication technology ICT in the organization of school and university education Internationally renowned researchers present theoretical perspectives with proposals for and evaluations of educational practices Each chapter discusses different aspects of the use of ICT in education including the role of perceptual processes in learning external cognition as support for interactive learning the role of meta cognition simulation learning environments as cognitive tools the role of science controversy for knowledge integration the use of ICT in the development of educators and the role of narratives in education ICT has great potential for revolutionizing education Large investments of resources are being made often without a strong understanding of how ICT will or should be implemented The expectation is that students will show immediate improvements in terms of their motivation to learn and their learning achievements but reality is different Progress of ICT in education requires more than just computers in the classroom It demands an understanding of the complex processes contributing to human learning and how they interact with new technologies This text provides theoretical perspectives on the learning processes that can be used as a foundation for constructing pedagogically valuable tools based on ICT The combination of results from cognitive science and pedagogy with more practically oriented suggestions for how ICT can be used in various forms of education makes this book suitable for researchers and students in the cognitive and educational sciences as well as for practitioners and planners of education

Monitoring the Health of Populations Ron Brookmeyer, Donna F. Stroup, 2003-10-23 Public health faces critical challenges ranging from outbreaks of new and old pathogens to the threat of bioterrorism and the impact of lifestyle and environmental changes on health. Modern tools of health surveillance and sound statistical practices are essential for meeting these challenges and providing accurate warnings about real public health threats without wasting resources on false alarms. Advances in statistical techniques, computing power, and the Internet have led to many new approaches to monitoring population health, analyzing the data, and rapidly sharing it. This text explores the critical issues in the statistical analysis and interpretation of public health surveillance data. It covers statistical methods for detecting disease outbreaks and clusters, the use of survey methods, interpreting time trends and geographic patterns, exploratory statistical analysis of surveillance data, and web-based health reporting systems for the rapid detection of public health problems among other topics. The methodological approaches are illustrated in discussions of several current public health issues, including the HIV/AIDS epidemic, anthrax, health effects of particulate air pollution, and trends in prostate cancer. The methods are broadly applicable to surveillance systems and registries for numerous health conditions, e.g., infectious diseases, chronic diseases, adverse drug reactions. The book provides numerous illustrations, worked examples, and practical information for actually implementing the methods. It will serve as a reference for public health practitioners and as a textbook for courses on disease surveillance taken by students of statistics, biostatistics, epidemiology, or public health.

Handbook for Teaching Introductory Psychology Michelle Rae Hebl, Charles L. Brewer, Ludy T. Benjamin, Jr., 2001-08-01 Like its predecessors, Volume III of the Handbook for Teaching Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from Teaching of Psychology TOP, the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, Issues and Approaches in Teaching Introductory Psychology, contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives, students' existing knowledge of psychology, including their misconceptions, a comparison of introductory textbooks, and tips on how to evaluate them, test questions, and student factors affecting exam performance, an overview of different forms of feedback, giving extra credit, and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further

Schoenfeld, Alan H. Sloane, 2016-05-06 In the early 1980s there was virtually no serious communication among the various groups that contribute to mathematics education mathematicians mathematics educators classroom teachers and cognitive scientists Members of these groups came from different traditions had different perspectives and rarely gathered in the same place to discuss issues of common interest Part of the problem was that there was no common ground for the discussions given the disparate traditions and perspectives As one way of addressing this

problem the Sloan Foundation funded two conferences in the mid 1980s bringing together members of the different communities in a ground clearing effort designed to establish a base for communication In those conferences interdisciplinary teams reviewed major topic areas and put together distillations of what was known about them A more recent conference upon which this volume is based offered a forum in which various people involved in education reform would present their work and members of the broad communities gathered would comment on it The focus was primarily on college mathematics informed by developments in K 12 mathematics The main issues of the conference were mathematical thinking and problem solving
