Global Technology and Legal Theory Guilherme Cintra Guimarães, 2019-06-05 The rise and spread of the Internet has accelerated the global flows of money technology and information that are increasingly perceived as a challenge to the traditional regulatory powers of nation states and the effectiveness of their constitutions The acceleration of these flows poses new legal and political problems to their regulation and control as shown by recent conflicts between Google and the European Union EU This book investigates the transnational constitutional dimension of recent conflicts between Google and the EU in the areas of competition taxation and human rights More than a simple case study it explores how the new conflicts originating from the worldwide expansion of the Internet economy are being dealt with by the institutional mechanisms available at the European level The analysis of these conflicts exposes the tensions and contradictions between on the one hand legal and political systems that are limited by territory and on the other hand the inherently global functioning of the Internet The EU s promising initiatives to extend the protection of privacy in cyberspace set the stage for a broader dialogue on constitutional problems related to the enforcement of fundamental rights and the legitimate exercise of power that are common to different legal orders of world society Nevertheless the different ways of dealing with the competition and fiscal aspects of the conflicts with Google also indicate the same limits that are generally attributed to the very project of European integration showing that the constitutionalization of the economy tends to outpace the constitutionalization of politics Providing a detailed account of the unfolding of these conflicts and their wider consequences to the future of the Internet this book will appeal to scholars working in EU law international law and constitutional law as well as those in the fields of political science and sociology

Enterprises, Industry and Innovation in

the People's Republic of China Alberto Gabriele, 2020-04-06 This book analyses and critically evaluates the development of two key components of China's economy: the network of productive enterprises and the national innovation system from the inception of market-oriented reforms to the present day. The approach is a partly novel one, albeit inspired by classical political economy rooted in the structure and evolution of social relations of production and exchange and of the institutional setting in these two crucial domains. The main findings are twofold: First, the role of planning and public ownership far from withering has been upheld and qualitatively enhanced, especially throughout the most recent stages of industrial reforms. Second, enterprises are increasingly participating along with universities and research centers in a concerted and historically unparalleled effort to dramatically upgrade China's capacity to engage in indigenous innovation. As a result, China's National Innovation System has been growing and strengthening at a pace much faster than that of the national economy as a whole. The book also presents a speculative and provisional perspective on the validity and meaning of the claim that the country's socioeconomic system is indeed a form of socialism with Chinese characteristics. It will be of interest to students and scholars researching China's politics and development economics.

Global Players and the Indian Car Industry Jatinder Singh, 2018-09-03 This book is one of the first critical analyses of the automobile industry in India. It studies the sector in general and the passenger car industry in particular and provides valuable insights into the operation of Foreign Direct Investment (FDI) companies in a technology-intensive industry under changing economic regimes. The volume underlines the influence of the changing nature of foreign investment, the impact of economic reforms, technology regimes, and industrial policy on growth, structural changes, and development. It offers a detailed account of the trade performance of manufacturers in India's passenger car industry. It also looks at successful cases to draw policy lessons towards encouraging quality FDI and developing India as a base for world production. A useful addition to industry studies in India, this book, with its wide coverage and contemporary analyses, will interest scholars and researchers of economics, Indian economy, and industrial policy, industrial economics, automobile industry, and manufacturing sector development economics and international economics. It will also appeal to policymakers, practitioners, and industrial associations.
