

Graph 3.1: Double OB-H-V Base shear in kN

Graph 3.2: Multi OB-H-V Base shear in kN

Discussion – Base shear

- By analysing the above graph it is observed that by introduction of outrigger system there will be an increase in base shear.
- The base shear is increased when outrigger is provided it occurs due to increase in stiffness and mass.
- The base shear will be less for the outrigger system compare to the outrigger with belt truss system.

4. CONCLUSIONS

As per the study made the following conclusion have been arrived at

- The introduction of outrigger and outrigger with belt truss there is a significant contribution to the stiffness of the structure.
- For single, double, multi storeys the provision of and outrigger with belt truss system at 15, 15-30, 15-30-45 storeys will increase the lateral stiffness of the structure and resulting the reduction of natural time period.
- The base shear is increased when outrigger is provided and base shear will be less for the outrigger system when compared to the outrigger with belt truss system.
- Providing a outrigger and outrigger with belt truss system at 15, 15-30, 15-30-45 storey will decrease the displacement of the structure and hence it is

effective in resisting the lateral force compare to the other stories.
