Hands, 2018-04-19 The form of reflexivity defined by the dictionary as that which is directed back upon itself that is most relevant to economic methodology is that where observation of the economy leads to ideas that change behavior which in turn changes is directed back upon the economy itself As George Soros explains if investors believe that markets are efficient then that belief will change the way they invest and that in turn will change the nature of the markets they are observing That is the principle of reflexivity Although various versions of reflexivity have long been discussed in recent years George Soros has been particularly effective in bringing ideas about reflexivity to the attention of the economic and financial communities In a series of writings he has systematically argued that reflexivity is not only an important aspect of economic life it is an aspect that is neglected in most mainstream theorizing and in addition that the neglect of reflexivity has been responsible for the failure of economists to predict explain or offer a solution for events such as the recent financial crisis Soros ideas about reflexivity have important methodological significance and his chapter in this book summarizes and clarifies his arguments His contribution is joined by those of thirteen scholars from a wide range of relevant fields who provide a commentary on the idea of reflexivity in economics This book was originally published as a special issue of The Journal of Economic Methodology
