K.H.J Buschow,G.J Long,F. Grandjean,2012-12-06 High density digital magnetic and magneto optical storage devices are widely used in audio video and data processing information technology as well as in CAD CAM computer systems These widespread uses generate a continually increasing demand for both increased information storage densities and capacities and for reduced access times Hence the materials engineering of high density storage media with a high signal to noise ratio and the associated design of sophisticated read and write heads form the basis of major technological research This research is especially complex because ideally the recorded information should be both erasable and at the same time secure and accessible over periods of many decades As a result research on these complex problems requires a multidisciplinary approach which utilizes the expertise in such widely differing fields as organic inorganic and solid state chemistry metallurgy solid state physics electrical and mechanical engineering and systems analysis Often further research specialization is necessary in each of these different disciplines For instance solid state physics and chemistry address the problems of crystallographic structure and phase diagram determination magnetism and optics but more advanced research methods such as high resolution electron microscopy and electronic band structure calculations are necessary to understand the microstructure of particulate recording media or the electronic spectra of magneto optical recording media List of Workers in Subjects Pertaining to Agriculture in State Agricultural Colleges and Experiment Stations United States.

Smith,2012-12-06 There has been an increasing interest in bryophyte ecology over the past 100 or so years initially of a phytosociological nature but additionally in recent years of an experimental nature as well Early studies of bryophyte communities have led to detailed investigations into the relationships between the plants and their environment Ecological papers the large number of which is evidenced by the length of the bibliographies in the subsequent chapters have appeared in numerous journals Yet apart from review chapters by H Gams and P W Richards in Manual of Bryology edited by H Verdoorn in 1932 and chapters in E V Watson's Structure and Life of Bryophytes Prem Puri's Bryophytes A Broad Perspective and D H S Richardson's The Biology of Mosses published in 1972 1973 and 1981 respectively no general accounts of bryophyte ecology have been published Although the Bryophyta is a relatively small division of plants with between 14000 and 21000 species the interest that they have aroused is out of all proportion to the size either of the plants or of the division It is evident however that despite their relative insignificance they play an important ecological role especially in extreme environments and in the case of bryophytes in tropical cloud forests and of Sphagnum may even be a dominant factor in the ecology of the area concerned Index Medicus ,2003 Vols for 1963 include as pt 2 of the Jan issue Medical subject
