Powerless Diana Hernández, Jennifer Laird, 2025-04-08 Energy serves as the lifeblood of our daily experiences It permeates virtually every aspect of our existence facilitating nourishment safety and productivity When affordability threatens energy s availability a family s living situation can become untenable too cold too

hot too dark and too often unhealthy and unsafe In *Powerless* sociologists Diana Hernandez and Jennifer Laird reveal the hidden hardship of energy insecurity the inability to adequately meet household energy needs Approximately one in ten households in the U S are energy insecure and four in ten are at risk for energy insecurity These statistics alone do not convey the acute pain of utility shutoffs or the relentless toll of chronic energy hardships marked by difficult choices and harsh living conditions Drawing on survey data and interviews with one hundred energy insecure individuals and families Hernandez and Laird detail the experience of energy insecurity Individuals and families suffering from energy insecurity endure economic hardships such as difficulty paying utility bills utility debt and disconnection from utility services They also struggle with physical challenges such as poor housing conditions and poor or dysfunctional heating and cooling systems They are often forced to make difficult choices about what bills to pay These decisions are sometimes referred to as heat or eat choices as families cannot afford to pay for heating and food at the same time Energy insecure individuals and families employ a variety of strategies to keep energy costs down to avoid having to make these hard choices This includes deliberate underconsumption of energy enduring physical discomfort and using dangerous alternatives such as open flames ovens or space heaters to try to maintain a comfortable temperature in their home To be energy insecure is to suffer Despite the heavy toll of energy insecurity most people confront these difficulties behind closed doors believing it is a private matter Thus the enormous social crisis of energy insecurity goes unnoticed Hernandez and Laird argue that household energy is a basic human right and detail policies and practices that would expand access to consistent safe clean and affordable energy Their proposals include improving the current energy safety net which is limited and often does not serve the most energy insecure due to stringent program requirements and administrative burdens They also suggest redesigning rates to accommodate income promoting enrollment and expansion of discount programs reforming utility disconnection policies improving energy literacy and ensuring an equitable shift to renewable energy resources *Powerless* creates a comprehensive picture of the complex social and environmental issue of energy insecurity and shows how energy equity is not just an aspiration but an achievable reality [Ecohouse 2](#) Susan Roaf, Manuel Fuentes, Stephanie Thomas, 2003 Have all the knowledge at your fingertips with this how to guide to ecohouse design Learn about the building materials and technology that you need to use to make your house green Case studies from around the world illustrate the best examples of eco design and inspire your own eco designs **Apocalypse 2012** Lawrence E. Joseph, 2007-01-23 Updated to include dramatic new evidence from NASA and the National Academy of Sciences pointing to a knockout of the electrical power grid by solar systems expected to climax in 2012 2013 Don't look up It won't help You can't get out of the way you can't dig a hole deep enough to hide The end is coming and there's nothing you can do about it So why read this book Because you can't look away when not just the religious fanatics are saying we're all going to be destroyed but the scientists are in on the act too Here's what they're saying We're a million years over due for a mass extinction The sun at radiation minimum is acting much worse

than at solar maximum and one misdirected spewing of plasma could fry us in an instant The magnetic field which shields us from harmful radiation is developing a mysterious crack Our solar system is entering an energetically hostile part of the galaxy The Yellowstone supervolcano is getting ready to blow and if it does we can look forward to nuclear winter and 90 percent annihilation The Maya the world's greatest timekeepers ever say it's all going to stop on December 21 2012 So see There's nothing you can do but you might as well sit back and enjoy the show You'll get a good chuckle That's why you should read this book
