Appendix E5: Transformer Condition Assessment

E5.1 GENERAL

Power transformers are key components in the power train at hydroelectric powerplants and are appropriate for analysis under a condition assessment program. - Insulating Oil Analysis (DGA and Furan)
- Power Factor and Excitation Current Tests
- Operation and Maintenance History
- Age

These condition indicators are initially evaluated using Tier 1 inspections, tests, and measurements, which are conducted by utility staff or contractors over the course of time and as
