Chapter 1-Answer Key

CONCEPT CHECK

1.1 What is the hydrologic cycle? What are the pathways that precipitation falling onto the land surface of the Earth is dispersed to the hydrologic cycle?

ANSWER:

The hydrologic cycle is a continuous process in which water is evaporated from water surfaces and the oceans, moves inland as moist air masses, and produces precipitation if the correct vertical lifting conditions exist.

A portion of precipitation (rainfall) is retained in the soil near where it falls and returns to the atmosphere via evaporation (the conversion of water to water vapor from a water surface) and transpiration (the loss of water vapor through plant tissue and leaves). Combined loss is called evapotranspiration and is a maximum value if the water supply in the soil is adequate at all times. Some water enters the soil system in infiltration which is a function of soil moisture conditions and soil and may reenter channels later as interflow or may percolate to recharge the shallow ground water. The remaining portion of precipitation becomes overland flow or direct runoff which flows generally in a down-gradient direction to accumulate in local streams that then flow into rivers.

Nature-Based Solutions for Urban Water Management Junguo Liu, Zhan Tian, Qinhua Ye, Laixiang Sun, Shiqiang Wu, 2024-02-23 Water plays an essential role in the development and functioning of a city but could also be a key risk factor for urban pluvial flooding which may occur more frequently in the context of future climate change The traditional means of flood risk management relied heavily on engineering measures or the use of gray infrastructure Recently there has been a call to integrate nature based solutions NBS which make use of natural processes and ecosystem services with conventional engineering approaches NBS infrastructures and designs pay great attention to ecosystem services considerations in assessing their induced hydrological processes as well as in managing the stormwater and mitigating urban flood and droughts Nevertheless compared with grey infrastructure larger space could be demanded for NBS while the buffer effect for NBS in extremes events is still uncertain for evaluation *Hydrology and Floodplain Analysis* Philip B. Bedient, Wayne Charles Huber, 2002 Now in its third edition *Hydrology and Floodplain Analysis* continues to offer a clear and up to date presentation of the fundamental concepts and design methods required to understand hydrology and floodplain analysis It addresses the computational emphasis of modern hydrology and provides a balanced approach to important applications in watershed analysis floodplain computation flood control urban hydrology stormwater design and computer modeling Includes HEC HMS HEC RAS and SWMM models plus GIS and radar rainfall The text is ideal for students taking an undergraduate or graduate course on hydrology while the practicing engineer should value the book as a modern reference for hydrologic principles flood frequency analysis floodplain analysis computer simulation and hydrologic storm water design Updated coverage in the third edition includes Three New Chapters Chapter 1 Geographic Information Systems GIS Chapter 2 Use of NEXRAD Radar Data Chapter 3 Floodplain Management Issues in Hydrology A new detailed case study of a complex watershed using GIS linked with radar technology New tools and technologies used for watershed analysis hydrologic modeling and modern floodplain delineation New examples and homework problems in each chapter **Methods of Environmental and Social Impact Assessment** Peter Morris, Riki Therivel, Graham Wood, 2017-09-13 Environmental and social impact assessment ESIA is an important and often obligatory part of proposing or launching any development project Delivering a successful ESIA needs not only an understanding of the theory but also a detailed knowledge of the methods for carrying out the processes required Riki Therivel and Graham Wood bring together the latest advice on best practice from experienced practitioners to ensure an ESIA is carried out effectively and efficiently This new edition explains how an ESIA works and how it should be carried out demonstrates the links between socio economic cultural environmental and ecological systems and assessments incorporates the World Bank's IFC performance standards and best practice examples from developing as well as developed countries includes new chapters on emerging ESIA topics such as climate change ecosystem services cultural impacts resource efficiency land acquisition and involuntary resettlement Invaluable to undergraduate and
