Petrochronology Matthew J. Kohn, Martin Engi, Pierre Lanari, 2019-11-05 Petrochronology is a rapidly emerging branch of Earth science that links time ages or rates with specific rock forming processes and their physical conditions It is founded in petrology and geochemistry which define a petrogenetic context or delimit a specific process to which chronometric data are then linked This combination informs Earth's petrogenetic processes better than petrology or geochronology alone This volume and the accompanying short courses address three broad categories of inquiry Conceptual approaches chapters include petrologic modeling of multi component chemical and mineralogic systems and development of methods that include diffusive alteration of mineral chemistry Methods chapters address four main analytical techniques specifically EPMA LA ICP MS SIMS and TIMS Mineral specific chapters explore applications to a wide range of minerals including zircon metamorphic igneous and detrital Hadean baddeleyite REE minerals monazite allanite xenotime and apatite titanite rutile garnet and major igneous minerals olivine plagioclase and pyroxenes These applications mainly focus on metamorphic igneous or tectonic processes but additionally elucidate fundamental transdisciplinary progress in addressing mechanisms of crystal growth the chemical consequences of mineral growth kinetics and how chemical transport and deformation affect chemically complex mineral composites Most chapters further recommend areas of future research **Russian Chemical Reviews**

Vladislav Golyanik proposes several new methods for dense non rigid structure from motion NRSfM as well as alignment of point clouds The introduced methods improve the state of the art in various aspects i e in the ability to handle inaccurate point tracks and 3D data with contaminations NRSfM with shape priors obtained on the fly from several unoccluded frames of the sequence and the new gravitational class of methods for point set alignment represent the primary contributions of this book About the Author Vladislav Golyanik is currently a postdoctoral researcher at the Max Planck Institute for Informatics in Saarbrücken Germany The current focus of his research lies on 3D reconstruction and analysis of general deformable scenes 3D reconstruction of human body and matching problems on point sets and graphs He is interested in machine learning both supervised and unsupervised physics based methods as well as new hardware and sensors for computer vision and graphics e g quantum computers and event cameras **The DNA of Pediatric Neurosurgery** Hannes Haberl,2025-07-25 Highly specialized fields like pediatric neurosurgery evolve in the hands of a small but international group of dedicated experts As such comprehensive training requires a large degree of mobility Hannes Haberl the editor of this book looks back on 20 years of productive sometimes surprising but always profitable encounters with respected colleagues in order to review and extend his personal range of approaches and surgical techniques This book is the result of very personal communications between the editor and 25 of the most experienced pediatric neurosurgeons Introducing their very personal attitudes and approaches the authors offer also surgical tips tricks and insights which have proven useful in daily surgical practice and education Although or precisely because not a conventional textbook it is highly recommendable for neuro surgeons neurologists pediatricians and interested members of related disciplines **State-of-the-Art Laser Spectroscopy and its Applications : Volume II** Yufei Ma,Qun Hao,Karol Krzempek,2023-02-09 **Clusters and Superclusters of Galaxies** A.C. Fabian,2012-12-06 Clusters and superclusters of galaxies are the largest objects in the Universe They have been the subject of intense observational studies at a variety of wavelengths from radio to X ray which has provoked much theoretical debate and advanced our understanding of the recent evolution of the large scale structure of the Universe The current status of the subject is reviewed in this volume by active researchers who lectured at a NATO Advanced Study Institute held in Cambridge England in July 1991 Much of the material is presented in a pedagogical manner and will appeal to scientists astronomers and graduate students interested in extragalactic astronomy **Detecting Environmental Radioactivity** Manuel García-León,2022-11-30 This textbook presents the principles and methods for the measurement of radioactivity in the environment In this regard specific low level radiation counting and spectrometry or mass spectrometry techniques are discussed including sources distribution levels and dynamics of radioactivity in nature The author gives an accurate description of the fundamental concepts and laws of radioactivity as well as the different types of

detectors and mass spectrometers needed for detection Special attention is paid to scintillators semiconductor detectors and gas ionization detectors In order to explain radiochemistry some concepts about chemical separations are introduced as well The book is meant for graduate and advanced undergraduate students in physics chemistry or engineering oriented to environmental sciences and to other disciplines where monitoring of the environment and its management is of great interest

Science And Technology In Deep Underground Laboratories Aldo Ianni, Sean M. Paling, Carlos Peña Garay, Jeter Hall, 2024-12-31 Deep Underground Laboratories are multidisciplinary research infrastructures with a rock overburden that goes from a few hundred meters to a few kilometers Presently there are 13 laboratories in operation on three Continents North America Europe Asia Australia for a global excavation volume of order 10^6 m³ New laboratories are being constructed proposed including a new one in South America The main reason to develop an underground infrastructure is related to operate in a less radioactive environment where in particular muons from cosmic rays are strongly suppressed This low background environment opens the possibility to search for very rare events such as low energy neutrino interactions dark matter direct detection and neutrinoless double beta decay These are crucial studies to enhance our understanding of the Universe In addition these special environments in which these infrastructures are located provide opportunities to carry out many and varied studies on geology geophysics biology and planetary exploration of significant interest and impact in both pure and applied science A number of technological challenges over the last decades have been faced by scientists working in these infrastructures As a consequence state of the art facilities are in operation in Underground Laboratories for radio purity assay ultra low temperature detectors quantum computing radon suppression and mitigation advanced machining and next generation gravitational wave detectors
