MOVEMENT OF SUBSTANCES INTO AND OUT OF CELLS

DIFFUSION

Diffusion = net movement of particles from high to low concentration
Diffusion = passive, no energy required, result of random movement
Concentration gradient = difference in concentration

Increasing diffusion rate = steeper gradient, larger rate cells, small size

OSMOSIS

Osmosis = the diffusion of water molecules across partially permeable membrane from high to low concentration (water)

Isotonic = same water concentration in solution on both sides
Hypertonic = hypertonic solution has higher water concentration
Hypotonic = hypotonic solution has lower water concentration
Rugel = high internal water pressure, pushes against cell wall of plant cells
Turgid = plant cell when a water-filled vacuole is the central vacuole
Plasmolysed = when cells lose water through osmosis

ACTIVE TRANSPORT

Active transport = when particles move against a concentration gradient
Energy enters in the cell membrane, gets up particles and moves them
The cell membrane against concentration gradient using ATP

FACTOALS

Diffusion

Not living system

Diffusion occurs in all living and non-living systems

CELL ORGANELLES

Organelles = subcellular structures in cells

Cytoplasm

Where chemical reactions take place

Living, jelly-like material, supports organelles

Contains enzymes, water and solutes

Nucleus

Contains genetic information of a cell

Enclosed in a nuclear membrane, contains chromosomes

Control the activity in cells by determining the proteins produced

Level 9 achieved!

THE ORGANISM IN THE ENVIRONMENT

Organisms interact with their physical, chemical and biological environment
Study of organisms and the environment interacting as a system
All part of an ecosystem

Community = all the organisms living in the same area at the same time
Ecosystem = different species living and interacting in the same area
Biosphere = all the organisms living on Earth and their physical environment

POPULATION

Group of individuals of the same species living in the same area at the same time

Population density = number of individuals per unit area

Abundance

Richness

Evenness

Factors that affect the size and distribution of populations

Birth rate

Death rate

Population growth = increase in the number of individuals in a population

Population density

Population growth rate = the rate at which the number of individuals in a population is increasing

Population growth rate = the rate at which the number of individuals in a population is increasing
