DNA Techniques to Verify Food Authenticity Malcolm Burns, Lucy Foster, Michael Walker, 2019-10-16 The food supply chain needs to reassure consumers and businesses about the safety and standards of food. Global estimates of the cost of food fraud to economies run into billions of dollars, hence a huge surge in interest in food authenticity and means of detecting and preventing food fraud and food crime. Approaches targeting DNA markers have assumed a pre-eminence. This book is the most comprehensive and timely collection of material from those working at the forefront of DNA techniques applied to food authenticity. Addressing the new field of analytical molecular biology as it combines the quality assurance rigour of analytical chemistry with DNA techniques, it introduces the science behind DNA as a target analyte, its extraction, amplification, detection and quantitation as applied to the detection of food fraud and food crime. Making the link with traditional forensic DNA profiling and describing emerging and cutting-edge techniques such as next-generation sequencing, this book presents real-world case studies from a wide perspective, including from analytical service providers, industry enforcement agencies and academics. It will appeal to food testing laboratories worldwide who are just starting to use these techniques and students of molecular biology, food science and food integrity. Food policy professionals and regulatory organisations who will be using these techniques to back up legislation and regulation will find the text invaluable. Those in the food industry in regulatory and technical roles will want to have this book on their desks.

Sustainability Impact Assessment of Land Use Changes Katharina Helming, Marta Pérez-Soba, Paul Tabbush, 2008-06-11 There are many reasons why strategic intelligence is required to support policy decisions. These primarily stem from the nature of today's knowledge society with two contrasting trends. On the one hand, there is a trend of increasing human intelligence in the economic, social and political systems. On the other hand, there is a trend towards dissolving certainties about the problems and solutions of today's society. Clearly, more information does not necessarily imply more certainties on how to act. What is more, the same facts are often interpreted in markedly different ways; the same policy-relevant information can and often does result in conflicting framing of a problem by different stakeholders. This is mainly due to competing assumptions rather than because of inconsistent facts. Therefore, it is not surprising that policy makers are calling for strategic intelligence to support their understanding of today's challenges, including the relevant aspects of science and technology, their impact and their possible future developments. Over the last 15 years, Europe has rapidly adopted the practice of developing and using Impact Assessment (IA) tools to support decision making. Formal procedures and guidance for IA are well established within the European Commission and in most EU Member States. The adoption of IA procedures alone, however, does not guarantee that every policy domain is actually using the full potential of these assessment tools in the preparation of policies and legislation.

Rock Mechanics in Civil and Environmental Engineering Jian Zhao, Vincent Labiouse, Jean-Paul Dudt, Jean-Francois Mathier, 2010-05-19 During the last two decades, rock

mechanics in Europe has been undergoing some major transformation. The reduction of mining activities in Europe affects heavily on rock mechanics teaching and research at universities and institutes. At the same time new emerging activities notably underground infrastructure construction, geothermal energy develop

Computational Nanotoxicology Agnieszka Gajewicz, Tomasz Puzyn, 2019-11-13. The development of computational methods that support human health and environmental risk assessment of engineered nanomaterials (ENMs) has attracted great interest because the application of these methods enables us to fill existing experimental data gaps. However, considering the high degree of complexity and multifunctionality of ENMs, computational methods originally developed for regular chemicals cannot always be applied explicitly in nanotoxicology. This book discusses the current state of the art and future needs in the development of computational modeling techniques for nanotoxicology. It focuses on i) computational chemistry, quantum mechanics, semi-empirical methods, density functional theory, molecular mechanics, molecular dynamics; ii) nanochemoinformatic methods, quantitative structure-activity relationship modeling, grouping, read across; and iii) nanobioinformatic methods, genomics, transcriptomics, proteomics, metabolomics. It reviews methods of calculating molecular descriptors sufficient to characterize the structure of nanoparticles, specifies recent trends in the validation of computational methods, and discusses ways to cope with the uncertainty of predictions. In addition, it highlights the status quo and further challenges in the application of computational methods in regulation (e.g. REACH, OECD) and in industry for product development and optimization, and the future directions for increasing acceptance of computational modeling for nanotoxicology.

Smart and Sustainable Planning for Cities and Regions Adriano Bisello, Daniele Vettorato, Håvard Haarstad, Judith Borsboom-van Beurden, 2021-03-22. This book offers a selection of research papers and case studies presented at the 3rd international conference Smart and Sustainable Planning for Cities and Regions held in December 2019 in Bolzano, Italy, and explores the concept of smart and sustainable planning, including top contributions from academics, policy makers, consultants, and other professionals. Innovation processes such as co-design and co-creation help establish collaborations that engage with stakeholders in a trustworthy and transparent environment while answering the need for new value propositions. The importance of an integrated holistic approach is widely recognized to break down silos in local government, in particular when aimed at achieving a better integration of climate energy planning. Despite the ongoing urbanization and polarization processes, new synergies between urban and rural areas emerge, linking development opportunities to intrinsic cultural, natural, and man-made landscape values. The increasing availability of big real-time urban data and advanced ICT facilitates frequent assessment and continuous monitoring of performances while allowing fine-tuning as needed. This is valid not only for individual projects but also on a wider scale. In addition, circling back to the first point, big urban data and ICT can be of enormous help in facilitating engagement and co-creation by raising awareness and by providing insight into the local consequences of specific plans. However, this potential is not yet fully exploited in standard processes and procedures, which

can therefore lack the agility and flexibility to keep up with the pulse of the city and dynamics of society The book provides a multi disciplinary outlook based on experience to orient the reader in the giant galaxy of smart and sustainable planning support the transposition of research into practice scale up visionary approaches and design groundbreaking planning policies and tools
