1. The first step in the process of the cell cycle is the replication of DNA. This process occurs in the S phase of the cell cycle. During this phase, the DNA is replicated, resulting in two identical copies of the DNA molecule. This process is essential for the cell to divide and produce two daughter cells.
2. The second step in the process of the cell cycle is the separation of the DNA molecules. This process occurs in the M phase of the cell cycle. During this phase, the DNA molecules are separated into two groups, one for each daughter cell. This process is essential for the cell to divide and produce two daughter cells.
3. The third step in the process of the cell cycle is the division of the cell. This process occurs in the C phase of the cell cycle. During this phase, the cell is divided into two daughter cells. This process is essential for the cell to divide and produce two daughter cells.
