Methods and Analytical Modeling Using Partial Differential Equations Tamara Fastovska, Yurii Kolomoitsev, Kateryna Buryachenko, Marina Chugunova,2025-03-28 Adequate mathematical modeling is the key to success for many real world projects in engineering medicine and other applied areas As soon as an appropriate mathematical model is developed it can be comprehensively analyzed by a broad spectrum of available mathematical methods For example compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious diseases and in mathematical models of population genetics While the existence of an optimal solution under certain condition can be often proved rigorously this does not always mean that such a solution is easy to implement in practice Finding a reasonable approximation can in itself be a challenging research problem This Research Topic is devoted to modeling analysis and approximation problems whose solutions exploit and explore the theory of partial differential equations It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions removability conditions for singularities the dependence of the local asymptotic property of these solutions on initial and boundary data and also the existence of solutions Contributors are particularly encouraged to focus on anisotropic models analyzing the preconditions on the strength of the anisotropy and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations The qualitative analysis and analytical results should be confirmed by the numerically observed solution behavior Handbook of Response to Intervention Shane R. Jimerson,Matthew K. Burns,Amanda

VanDerHeyden,2007-08-14 Until now practitioners have had access to few detailed descriptions of RTI methods and the effective role they can play in special education The Handbook of Response to Intervention fills this critical information gap In this comprehensive volume more than 90 expert scholars and practitioners provide a guide to the essentials of RTI assessment and identification as well as research based interventions for improving students reading writing oral and math skills **Artificial Intelligence in Education** Ning Wang,Genaro Rebolledo-Mendez,Noboru Matsuda,Olga C.
