National Directory of Commodity Specifications United States. National Bureau of Standards, 1932 **Effects of Finite Lattice Heat Capacity on Spin Lattice Relaxation** Robert L. Peterson, 1967 The transient magnetic behavior of a paramagnetic substance after an initial disturbance is considered theoretically for a variety of situations in which the lattice temperature rises as a result of energy flow from the magnetic electron spin system The relaxation mechanisms considered are the direct process involving interaction between spins and the resonant phonon modes and a T₂ Raman process involving the remaining phonon modes It is first assumed that the resonant and remaining modes are strongly coupled to each other and that the helium bath has been removed helium temperatures are assumed Next the opposite extreme is considered that in which the resonant and remaining modes are totally uncoupled the helium bath is again assumed to have been removed Two dramatic effects can occur depending upon initial conditions One is the rapid decay to saturation from initial inversion due to an avalanching creation of resonant phonons by the spins The second is the pronounced inhibition of the subsequent decay with the spins remaining near saturation Finally consideration is given to the case of spins coupled only to the resonant phonons which in turn are coupled to a constant temperature bath whether this be the helium or the remaining modes Recent phonon avalanche experiments are discussed in this context It is pointed out that such experiments performed in the absence of a bath may provide a reliable measurement of inelastic phonon boundary scattering

Felton, 2016-09-19 Aqueous based film coating has become routine in the pharmaceutical industry This process eliminates the use of organic solvents and thus avoids economic environmental and toxicological issues related to residual solvents and solvent recovery Aqueous based coating however is complex and many variables may impact the final product and its performance This fourth edition of Aqueous Polymeric Coatings for Pharmaceutical Dosage Forms aims to provide insight into the factors and parameters that should be considered and controlled for the successful development and commercialization of a coated product The fourth edition has been revised and expanded to reflect the most recent scientific advancements from the literature The contributing authors explain in detail using illustrated examples appropriate steps to solve and ideally avoid formulation processing and stability problems and to achieve an optimized dosage form Trade names and chemical names of commercially marketed coatings are used throughout the text to help familiarize the reader with the various materials

available for pharmaceutical applications This book will be a valuable resource for anyone in the pharmaceutical industry working in the area of aqueous based film coating The Code of Federal Regulations of the United States of America ,1981 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government **Effects of Mercury on Man and the Environment** United States. Congress. Senate. Committee on Commerce. Subcommittee on Energy, Natural Resources, and the Environment,1970 **Subcellular Biochemistry** Donald B. Roodyn,2012-12-06 This volume continues the tradition of SUBCELLULAR BIOCHEMISTRY of trying to break down interdisciplinary barriers in the study of cell function and of bringing the reader s attention to less well studied but nevertheless useful biological systems We start with an extensive article by T P Karpetsky M S Boguski and C C Levy on the structure properties and possible functions of polyadenylic acid Apart from revealing a general lack of appreciation of many important aspects of the chemical properties of poly adenylic acid the literature also shows that there is a great gulf between those who study the biological role of polyadenylic acid and those who study its physicochemi cal properties The article by Karpetsky and his colleagues is an attempt to overcome this lack of communication and to present an integrated view of the subject The authors go into the subject in full detail and the more biologically inclined reader may on occasion have to reread his nucleic acid physical chemistry notes However the effort is worthwhile and the article is a timely reminder that we cannot treat nucleic acids as mere abstractions but that they are complex organic macromolecules capable of equally complex but nevertheless important interactions The next article is by J Steensgaard and N P Hundahl Møller and deals with computer simulation of density gradient centrifugation systems
