The Holocene and Anthropocene Environmental History of Mexico Nuria Torrescano-Valle, Gerald A. Islebe, Priyadarsi D. Roy, 2019-12-02 This book provides essential information on Mexico's Holocene and Anthropocene climate and vegetation history. Considering the geography of Mexico which is home to a variety of climatic and environmental conditions from desert and tropical to high mountain climates, this book focuses on its postglacial paleoecology and paleoclimatology. Further, it analyses human intervention since the middle Holocene as a major agent of environmental change. Offering a valuable tool for understanding past climate change and its relationship with present climate change, the book is a must-read for botanists, ecologists, palaeontologists, and graduate students in related fields. Guillermo Cortés-Robles, Eduardo Roldán-Reyes, Fernando Aguirre-y-Hernández, 2024-05-08 This book explores various technical domains including industrial engineering, computer sciences, process engineering, and system engineering, seamlessly integrated with management theories. The book introduces the concept of management engineering and delves into its implementation process, including the development of new methodologies or frameworks designed to solve complex problems effectively. It provides a comprehensive perspective on the evolution of management engineering, presenting the most relevant strategies for assimilating this approach to generate value, especially in the context of emerging economies. *Of Rainfalls and Disasters*

Juan Manuel Rodríguez Esteves, Disasters associated with natural phenomena such as earthquakes, floods, droughts, etcetera, are intensifying damages that translate into deaths, the loss of infrastructure, and the interruption of economic activities. The accelerated growth of cities frequently incorporates new areas that are susceptible to certain hazards, leaving society increasingly exposed due to a mismanagement of land. Since the 1990s, the social sciences have developed the approach of vulnerability, which considers the conditions of weakness of a society to cope with hazards. We now know that risk is socially constructed, and so disasters are not only a result of the intensity of the geophysical phenomena that unleash them but also of the contexts of vulnerability present when a phenomenon takes place. The aim of this work is to show how the risk of flood disasters is constructed in Tijuana, Baja California, with four main elements as our starting point: An examination of floods since the late 19th century; the voice of the actors present for flooding events; a theoretical model to understand the

relationship between the hazard and the magnitude of the risk and recommendations for disaster risk management at a local level
