

- ▣ **Transverse axis** - the line segment joining the vertices
- ▣ **Center** - midpoint of the transverse axis of a hyperbola
- ▣ **Focal distance** - distance from the center to a focus.

We use a to denote the distance from the center to a vertex, which is also half of the transverse axis.

This means that the length of the transverse axis is $2a$.

the focal distance is denoted by c .

This means that the distance between the two foci is $2c$.

Since a focus is further from the center than a vertex, $c > a$. This implies that $c^2 - a^2 > 0$.

We can let b be a positive number such that $b^2 = c^2 - a^2$.

Knorr,2012-12-06 For textual studies relating to the ancient mathematical corpus the efforts by the Danish philologist L Heiberg 1854 1928 are especially significant Beginning with his doctoral dissertation *Quaestiones Archimedeae* Copenhagen 1879 Heiberg produced an astonishing series of editions and critical studies that remain the foundation of scholarship on Greek mathematical science For comprehensiveness and accuracy his editions are exemplary In his textual studies as also in the prolegomena to his editions he carefully described the extant evidence organized the manuscripts into stemmata and drew out the implications for the state of the text 5 With regard to his Archimedean work Heiberg sometimes betrayed signs of the philologist's occupational disease the tendency to rewrite a text deemed on subjective grounds to be unworthy 6 But he did so less often than his prominent 7 contemporaries and not as to detract appreciably from the value of his editions In examining textual questions bearing on the Archimedean corpus he attempted to exploit as much as possible evidence from the ancient commentators and in some instances from the medieval translations It is here that opportunities abound for new work extending and in some instances superseding Heiberg's findings For at his time the availability of the medieval materials was limited In recent years Marshall Clagett has completed a mammoth critical edition of the medieval Latin tradition of Archimedes 8 while the bibliographical instruments for the Arabic tradition are in good order thanks to the work of Fuat Sezgin **The International Conference Education and Creativity for a Knowledge based Society - Law, 2012** , **Ibn al-Haytham's Theory of Conics, Geometrical Constructions and Practical Geometry** Roshdi Rashed,2013-06-26 Theory of Conics Geometrical Constructions and Practical Geometry A History of Arabic Sciences and Mathematics Volume 3 provides a unique primary source on the history and philosophy of mathematics and science from the mediaeval Arab world The present text is complemented by two preceding volumes of A History of Arabic Sciences and Mathematics which focused on founding figures and commentators in the ninth and tenth centuries and the historical and epistemological development of infinitesimal mathematics as it became clearly articulated in the oeuvre of Ibn al Haytham This volume examines the increasing tendency after the ninth century to explain mathematical problems inherited from Greek times using the theory of conics Roshdi Rashed argues that Ibn al Haytham completes the transformation of this area of activity into a part of geometry concerned with geometrical constructions dealing not only with the metrical properties of conic sections but with ways of drawing them and properties of their position and shape Including extensive commentary from one of world's foremost authorities on the subject this book contributes a more informed and balanced understanding of the internal currents of the history of mathematics and the exact sciences in Islam and of its adaptive interpretation and assimilation in the European context This fundamental text will appeal to historians of ideas epistemologists and mathematicians at the most
