**Enabling Enterprise Transformation** Nagy K. Hanna,2009-12-11 Private enterprises in advanced economies have been learning to use information and communication technology ICT to innovate and transform their processes products services and business models significantly improving productivity and competitiveness Moreover the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation A key question today is whether and how developing countries can learn to benefit from the ICT revolution and what roles the government and private sector can play Already a number of developing countries have been inspired by the example of India and China and are now seeking to jump on the outsourcing bandwagon Nevertheless with few exceptions in the developing world little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT enabled growth poverty reduction and grassroots innovation Most communities and small and medium sized enterprises in developing countries for example face multiple constraints to adopting and leveraging this general purpose technology and lack the capabilities for maximizing its potential In Enabling Enterprise Transformation Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert the most current research and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT He assesses various initiatives to develop and diffuse ICT such as innovation funds incubators

parks public private partnerships and comprehensive promotion programs He argues for the strategic options now open for developing countries to participate in ICT production to deploy ICT to transform industries and services and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries and a dialogue among business leaders policymakers development agencies educational institutions and the general citizenry must be advanced

**DAT10603 Programming Principle , Risk Free Technology** Charles L. Nault,2009 IT has now reached utility status everywhere at least from an expectation standpoint Just as the utility of electricity is required to power our lights and equipment and oil or gas insures our heat in the winter a firm s network infrastructure MUST be always in place to maintain its Internet access computerization phone system and a host of other mission critical applications Contrary to days passed companies can no longer function without these Their customers employees and vendors expect business networks to be fully functional expeditious security protected and accessible around the clock This book addresses the implications of failing to insure that all your IT functions are utility status and tells non technical executives what needs to be done from a managerial perspective to achieve true utility status as well as how to pro actively monitor such functions to make sudden catastrophes a thing of the past The book will provide case studies of companies who have lost money and business because they failed to heed this message
