

Now let's assemble the outer solar system as Copernicus did.

4. Computing  $\theta_e$ . Copernicus knew that it takes 365 days for Earth to circle the Sun once, that is, for it to move through an angle of 360 degrees. Therefore, each day, Earth moves through an angle given by the mathematical expression  $\left(\frac{1 \text{ day}}{365 \text{ days}}\right) \times 360 \text{ degrees}$ . Or after  $d$  days, Earth has moved  $\left(\frac{d}{365}\right) \times 360 \text{ degrees}$ .
  - a. Compute how many degrees Earth moves in its orbit in 1 day.
  - b. Copernicus counted how many days elapsed between opposition (point E) and quadrature (point E'): 107 days. Using the given expression, compute how many degrees the Earth moves in 107 days. This is angle  $\theta_e$ .
5. Computing  $\theta_m$ . Copernicus also knew that it takes 687 days for Mars to circle the Sun once, that is, for Mars to move through an angle of 360 degrees.
  - a. Following the procedure in Part 4, write down a mathematical expression that represents how many degrees Mars moves in its orbit each day.
  - b. Now write down an expression that represents how many degrees Mars moves in its orbit in  $d$  days.
  - c. Compute how many degrees Mars moves in the 107 days between opposition and quadrature. This is angle  $\theta_m$ .
6. Computing  $\theta$ . Substitute your answers to Parts 4 and 5 into **Equation 9-3** to compute the value of angle  $\theta$ .
7. Mars's orbit. Finally, use Equation 9-2 to compute the radius of Mars's orbit, in AUs.

■ **EXTRA CREDIT: Jupiter's and Saturn's orbits** — *Do these planets* Jupiter takes 4332 days—almost 12 years—to orbit the Sun and around 88 days to go from opposition to the next quadrature. Saturn takes 10,761 days—nearly 30 years—to complete its orbit and there are also about 88 days between its opposition and next quadrature.

- a. On a separate sheet of paper, apply the above procedure for Mars to determine the radii of the orbits of Jupiter and Saturn, in AUs.
- b. Using a ruler, draw a careful scale-model showing the spacings of the six known planets in Copernicus's solar system to the scale 1 cm = 1 AU.

**El-Hi Textbooks in Print ,1984      Facilitating Seven Ways of Learning** James R. Davis,Bridget D. Arend,2023-07-03 For teachers in higher education who haven t been able to catch up with developments in teaching and learning James Davis and Bridget Arend offer an introduction that focuses on seven coherent and proven evidence based strategies The underlying rationale is to provide a framework to match teaching goals to distinct ways of learning based on well established theories of learning The authors present approaches that readers can readily and safely experiment with to achieve desired learning outcomes and build confidence in changing their methods of teaching Research on learning clearly demonstrates that learning is not one thing but many The learning associated with developing a skill is different from the

learning associated with understanding and remembering information which in turn is different from thinking critically and creatively solving problems making decisions or change paradigms in the light of evidence Differing outcomes involve different ways of learning and teaching strategies The authors provide the reader with a conceptual approach for selecting appropriate teaching strategies for different types of content and for achieving specific learning objectives They demonstrate through examples how a focused and purposeful selection of activities improves student performance and in the process makes for a more effective and satisfying teaching experience The core of the book presents a chapter on each of the seven ways of learning Each chapter offers a full description of the process illustrates its application with examples from different academic fields and types of institutions clearly describes the teacher s facilitation role and covers assessment and online use The seven ways of learning are Behavioral Learning Cognitive Learning Learning through Inquiry Learning with Mental Models Learning through Groups and Teams Learning through Virtual Realities and Experiential Learning Along the way the authors provide the reader with a basis for evaluating other approaches to teaching and other learning methodologies so that she or he can confidently go beyond the seven ways to adapt or adopt further strategies This is the ideal companion for teachers who are beginning to explore new ways of teaching and want to do some serious independent thinking about learning The book can also be used to prepare graduate students for teaching and will be welcomed by centers for teaching and learning to help continuing faculty re examine a particular aspect of their teaching
