How Can a Key Be Used to Identify Organisms?

Background:

Classification is a way of separating a large group of closely related organisms into smaller subgroups. With a classification system, identification of an organism is easy. The scientific names of organisms are based on the classification systems of living organisms. To classify an organism, scientists often use a *dichotomous key*. A *dichotomous key* is a listing of specific characteristics, such as structure and behavior, in such a way that an organism can be identified through a process of elimination.

Objectives

- Write a hypothesis statement to describe how sharks can be identified using a key.

- Use a dichotomous key to identify fourteen shark families.
- Construct your own key that will identify a page of fish pictures.

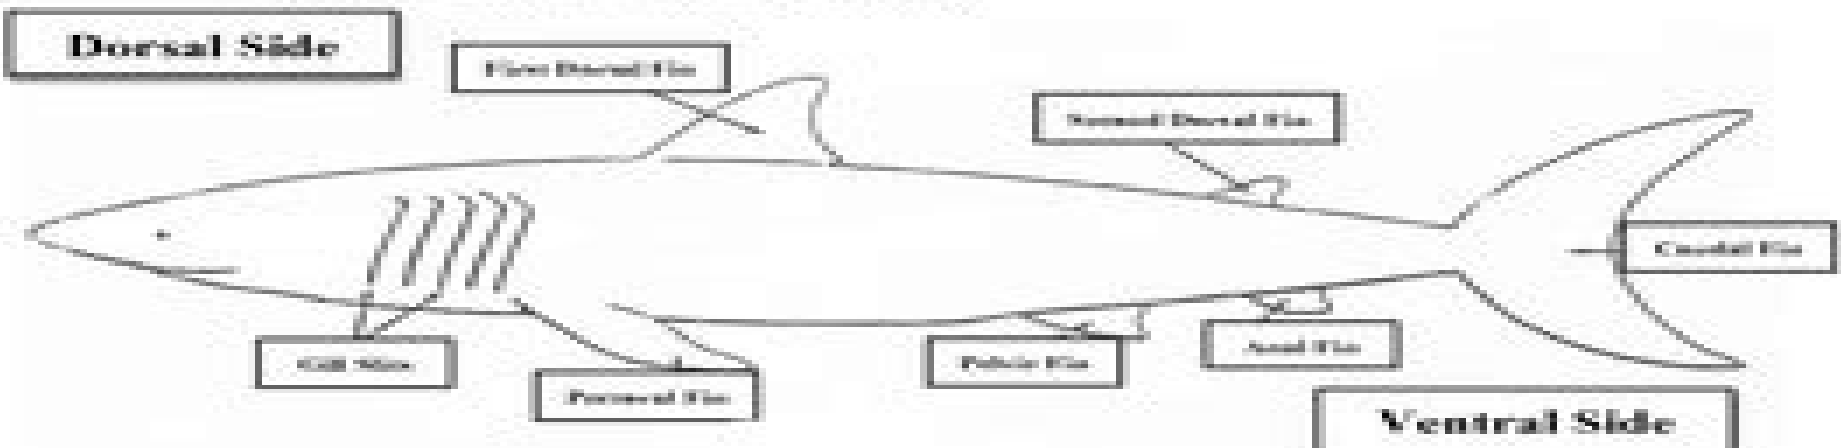

Procedure

Part 1:

- Use figure below as a guide to the shark parts used in the shark dichotomous key.
- Read sentences 1A and 1B for the dichotomous key. Then study Shark 1 for the characteristics related to its 1A and 1B. Follow the directions in those sentences and continue until a family name for Shark 1 is determined.
- Continue this process with each shark until all animals have been identified. Make a list of Sharks 1-14 and write each shark's family name next to the proper number.

Part 2:

- Write a dichotomous key that will identify the fish creatures in shown. Use the following guidelines and suggestions in preparing your dichotomous key.
 - Use all animals shown.
 - Assign a name to each creature. This name should describe some major characteristic not found on other animals. This characteristic should be one that could be used in placing other creatures having this name into only this same group.
