

ANSWER KEY — Faraday's Electromagnetic Lab II: Pickup Coil, Transformer, and Generator

Answer the following questions on a separate sheet. The sim is available at phet.colorado.edu.

Part A: Pickup Coil

1. Run the PhET sim, "Faraday's Electromagnetic Lab." Maximize the window. Click the Pickup Coil tab. You should see a bar magnet, a compass needle grid, and a coil attached to a light bulb.

2. Describe the most effective way of using the magnet and the coil to light the bulb if

a. the coil cannot be moved.

Move the magnet in and out of the coil.

b. the magnet cannot be moved.

Move the coil over and off the magnet.

3. Rank the arrangements and motions shown below from most effective to least effective in terms of lighting the bulb, allowing for ties. For example, if A were most effective, B were least effective, and C and D were equivalent to one another, the ranking would be $A > C = D > B$.

$C > B > A = D$ [$C > B > D > A$ and $C > B > D > A$ are acceptable]

4. Move the bar magnet through the coil and observe the motion of the electrons in the forward arc of the coil loops. Report the correlations of magnet motion and electron motion.

a. Magnet approaches from the left, north pole first; electrons move downward.

b. Magnet departs to the right, south end last; electrons move upward.

c. Magnet approaches from the right, south pole first; electrons move **downward**.

d. Magnet departs to the left, north end last; electrons move **upward**.

Information & Experimental Knowledge James Mattingly,2021-12-13 An ambitious new model of experimentation that will reorient our understanding of the key features of experimental practice What is experimental knowledge and how do we get it While there is general agreement that experiment is a crucial source of scientific knowledge how experiment generates that knowledge is far more contentious In this book philosopher of science James Mattingly explains how experiments function Specifically he discusses what it is about experimental practice that transforms observations of what may be very localized particular isolated systems into what may be global general integrated empirical knowledge Mattingly argues that the purpose of experimentation is the same as the purpose of any other knowledge generating enterprise to change the state of information of the knower This trivial seeming point has a non trivial consequence to understand a knowledge generating enterprise we should follow the flow of information Therefore the

account of experimental knowledge Mattingly provides is based on understanding how information flows in experiments what facilitates that flow what hinders it and what characteristics allow it to flow from system to system into the heads of researchers and finally into our store of scientific knowledge Government Reports Announcements & Index ,1994
