Nodes in Transport Networks - Research, Data Analysis and Modelling Elżbieta Macioszek, Nan Kang, Grzegorz Sierpiński, 2020-01-06. The publication delivers numerous valuable guidelines, particularly useful when making decisions related to road and rail nodes located in dense transport networks. The knowledge displayed while discussing practical examples, as well as the decision-making support systems described in the publication, will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems. This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport-related issues in both urban and regional areas, as well as to representatives of business and industry, being those who participate directly in the implementation of traffic engineering solutions. The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies, including those related to synchronisation of road traffic streams, improving the capacity, road traffic safety analysis, evaluation of changes in drivers' behaviour on account of introducing countdown timers at signal-controlled intersections, using UAV data, the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings. On the other hand, since the publication also concerns the new approach to theoretical models, including potential places of integration of public transport with the railway network or the speed adviser for pedestrians, enabling them to choose the optimal path at signal-controlled intersections, it should also attract the attention of researchers and scientists studying this body of problems. The publication, entitled *Nodes in transport networks: research, data analysis and modelling*, contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16-18 September 2019 in Katowice, Poland.

*Highway Noise; a Design Guide for Highway Engineers* Bolt, Beranek, and Newman, Bolt, Beranek, and Newman, inc, 1971. Various methods of assessing noise loudness and noise annoyance are reviewed and explained; sources, types, and intensities of traffic noise are noted; typical means of abatement and attenuation are described; design criteria for various land uses, ranging from low density to industrial, are suggested and compared with the results of previous BBN and British systems for predicting annoyance and complaint; and a design guide for predicting traffic noise, capable of being programmed for batch and on-line computer applications, is presented in a form suitable for use as a working tool. A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology, and each element is discussed in detail in the text. The text is

presented of a tape recording that takes the listener through a series of traffic situations with such variables as traffic distance flow velocity distance outdoors and indoors and presence or absence of absorbers and attenuators     *Hearings*
