Memorandum Life Science Paper 1 2013 September Grade 1:

Debating Modern Medical Technologies Karen J. Maschke, Michael K. Gusmano, 2018-09-14 This book analyzes policy fights about what counts as good evidence of safety and effectiveness when it comes to new health care technologies in the United States and what political decisions mean for patients and doctors. Medical technologies often promise to extend and improve quality of life but come with many questions: Are they safe and effective? Are they worth the cost? When should they be allowed on the market and when should Medicare, Medicaid, and private insurance companies be required to pay for drugs, devices, and diagnostic tests? Using case studies of disputes about the value of mammography screening, genetic testing for disease risk, brain imaging technologies to detect biomarkers associated with Alzheimer's disease, cell-based therapies, and new expensive drugs, Maschke and Gusmano illustrate how scientific disagreements about what counts as good evidence of safety and effectiveness are often swept up in partisan fights over health care reform and battles among insurance and health care companies, physicians, and patient advocates. *Debating Modern Medical Technologies: The Politics of Safety, Effectiveness, and Patient Access* reveals stakeholders differing values and interests regarding patient choice, physician autonomy, risk assessment, government intervention in medicine, and technology assessment and scientific innovation as a driver of national and global economies. It will help readers to understand the nature and complexity of past and current policy disagreements and their effects on patients.

Teach Janice Koch, 2018-12-04 *Teach* is a concise introduction to education that challenges readers' preconceived notions of teaching in order to transform them into reflective practitioners. Empathizing with the difficulties students face as they move from the college classroom to their own classrooms, revered author Janice Koch invites readers to both reflect on their own dispositions for teaching and look outside of themselves to the demands of the profession, making the philosophy of teaching and learning accessible and relevant. The Fourth Edition emphasizes the changing student population and the role of technology and globalization in the field while also including the Interstate Teacher Assessment and Support Consortium (INTASC) standards correlating with each chapter's content. With the guidance of this supportive text, readers will gain vital exposure by engaging with professional standards from the very start of their career.

Investigating Light and Shadow with Young Children (Ages 3-8) Beth Dykstra Van Meeteren, 2022-06-17 Children are intrigued by switches that power a light source and by items that reflect light and sparkle, and they take notice of personal shadows cast on the playground. An understanding of light and shadow is crucial to many STEM fields, including astronomy, biology, engineering, architecture, and more. This book shows teachers how to engage children ages 3-8 with light and shadow in a playful way, building an early foundation for the later, more complex study of this phenomena and ultimately for children's interest in professions within the STEM fields. The text offers guidance for arranging the physical environment of classrooms, integrating literacy learning and investigations, and building partnerships with administrators. Each volume in the *STEM for Our Youngest Learners* Series includes examples of educators and children engaging in inquiry learning.
