Microbial Reproduction: Microbial Growth

Objectives: Following this activity students will be able to: (1) describe the process of microbial growth and (2) explain the factors that influence growth.

Background: Microbial reproduction is the process by which a microorganism produces more of its kind. This can be done in two ways: asexual and sexual reproduction.

Microbial Growth Curves: The graph below shows the typical growth curve of a microorganism.

1. Lag phase: This is the period of time when the microorganism is adjusting to its new environment. It is the period of time when the microorganism is not yet dividing.

2. Log phase: This is the period of time when the microorganism is dividing rapidly. It is the period of time when the microorganism is in its most active state.

How does the lag phase change with different environmental conditions?

3. Stationary phase: This is the period of time when the microorganism has reached its maximum population. It is the period of time when the microorganism is no longer dividing.

How does the stationary phase change with different environmental conditions?

Microbial Growth:

Microbial growth is the study of the reproduction of microorganisms. It is a branch of microbiology that deals with the growth and development of microorganisms.

In this lesson, we will be studying the growth of microorganisms. We will be looking at the factors that influence growth and the different types of growth curves.

1. Factors that influence growth: The growth of microorganisms is influenced by a number of factors, including temperature, pH, and nutrient availability.

How does the growth of microorganisms change with different environmental conditions?

2. Growth curves: The growth of microorganisms can be plotted on a graph. The graph shows the number of microorganisms over time. The graph is divided into four phases: lag phase, log phase, stationary phase, and death phase.

How does the growth of microorganisms change with different environmental conditions?
