Survival Guide to General Chemistry Patrick E. McMahon, Rosemary McMahon, Bohdan Khomtchouk, 2019-02-13 This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific detailed step by step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples, and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step by step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid base reactions, which often persists through working with acid base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshmen in STEM fields. **Physics Daily Practice Problem Book** Career Point Kota, 2019-11-18 **E3**

Concepts of Small-scale Food Processing Donald G. Mercer, 2021-02-08. Providing detailed information on key areas of post harvest technologies, this book is written with small scale processors and entrepreneurs in food processing who have no formal training in Food Science or Food Engineering in mind. Uniquely, it will review the hands on aspects of food processing from a largely non academic viewpoint. It is written in non technical language and covers everything from the basic science of why food is processed to a description of the main methods used. Coverage includes all current technologies that are used at the small scale such as why food is processed, the historical development of food processing, background skills, heating and cooling in food processing, thermal processing basics and specialised calculations, drying food materials, statistical manufacturing control and sugar solution calculations in beverage making. The target audience for this book is vastly under served with appropriate information and the abundant use of photographs showing the various concepts described in the text makes this book appealing to those required to understand their food process operations.
