Misconi most significant publications was his 1979 Nature paper on streaming of interstellar grains into the solar system. The paper predicted that interstellar dust should stream into the solar system from the direction the then detectable interstellar gas and it also described the interaction of the extrasolar particles with the solar wind and the IP Interplanetary magnetic field. The paper was timely and highly prophetic as the stream of interstellar dust was detected just a few years later by instruments on the Ulysses and Galileo spacecraft. Dr Seung Soo Hong, former chair of the Astronomy Department at Seoul National University in Seoul, South Korea, said this about the author: "I still remember in one of those brain storming sessions he suggested to fire a big gun from a satellite to a nearby asteroid and to observe the scattered light of the Sun and material made source by the dust excavated from the asteroid surface. The Space Astronomy Laboratory team couldn't materialize the idea then. But to think back this was a brilliant idea with which one can characterize the nature of interstellar particles for a reasonable price."
