

Chapter 3.4 – Membrane Structure and Function

How do substances move in and out of cells?

Why?

An advertisement for sports drinks, such as Gatorade, Powerade, and Vitaminwater, etc., seem to be everywhere. All of these drinks are supposed to help your body recover and replenish lost electrolytes, fluids, and vitamins after exercise. But how do the essential molecules contained in these drinks get into your cells quickly to help you recover after exercise?

Model 1 – Simple Diffusion

- How many different types of molecules are shown in Model 1? **Two**
- Count and record the number of triangles and circles found on each side of the membrane.
Triangles — 14 on left, none on right; Triangles — 14 on left, none on right
- Which shape is larger? **Triangle**
- Describe the direction of the movement of the molecules in Model 1? **Triangle**
- Which molecules are able to pass through the semi-permeable membrane? Justify your answer.
The dots, because they are small and can fit through the gaps, and because they are shown equally distributed on both sides of the membrane

Model 2 – The Selectively Permeable Cell Membrane

Membrane Structure and Function Richard D. Klausner, Christoph Kempf, Jos van Renswoude, 1987 Membrane Structure and Function W. Howard Evans, John M. Graham, 1989 This study introduces the reader to the basic components of membranes and describes their functions in for example regulation of the cell's environment and the transport of nutrients and waste **Structure and Function of Biological Membranes** Lawrence I. Rothfield, 2014-06-28 Structure and

Function of Biological Membranes explains the membrane phenomena at the molecular level through the use of biochemical and biophysical approaches The book is an in depth study of the structure and function of membranes It is divided into three main parts The first part provides an overview of the study of the biological membrane at the molecular level Part II focuses on the detailed description of the overall molecular organization of membranes The third part covers the relationship of the molecular organization of membranes to specific membrane functions discusses catalytic membrane proteins presents the role of membranes in important cellular functions and looks at the membrane systems in eukaryotic cells Biochemists cell physiologists biologists researchers and graduate and postdoctoral students in the field of biology will find the text a good reference material **Structure and Properties of Cell Membrane Structure and Properties of Cell Membranes**

Gheorghe Benga, 2018-01-18 This book provides in depth presentations in membrane biology by specialists of international repute The volumes examine world literature on recent advances in understanding the molecular structure and properties of membranes the role they play in cellular physiology and cell cell interactions and the alterations leading to abnormal cells Illustrations tables and useful appendices complement the text Those professionals actively working in the field of cell membrane investigations as well as biologists biochemists biophysicists physicians and academicians will find this work beneficial *The Membranes of Cells* Philip Yeagle, 1993 In this new edition of The Membranes of Cells all of the chapters

have been updated some have been completely rewritten and a new chapter on receptors has been added The book has been designed to provide both the student and researcher with a synthesis of information from a number of scientific disciplines to create a comprehensive view of the structure and function of the membranes of cells The topics are treated in sufficient depth to provide an entry point to the more detailed literature needed by the researcher Key Features Introduces biologists to membrane structure and physical chemistry Introduces biophysicists to biological membrane function Provides a comprehensive view of cell membranes to students either as a necessary background for other specialized disciplines or as an entry into the field of biological membrane research Clarifies ambiguities in the field **Structure and Properties of**

Mammalian Cell Membranes G. A. Jamieson, D. M. Robinson, 2014-05-20 Mammalian Cell Membranes Volume 1 General Concepts is a collection of papers that deals on the physical and chemical studies focusing on membrane structure and function This collection reviews the interpretation of the anatomy of the mammalian cell including its separation and cultivation The different methods of isolation of its surface membrane are then evaluated to bring some understanding of the subject More descriptions of the various physical techniques adopted to membrane constituents and to cell membrane research such as nuclear magnetic resonance electron spin resonance fluorescence and flash photolysis spectroscopy are given Discoveries of mitochondrial DNA and other techniques have increased investigation of the synthesis and components of functional mitochondria leading to different perspectives on models of membrane structure This book can serve the needs of biochemists and microbiologists in advancing their work research and understanding of mammalian cell membranes

Concepts of Membrane Structure Ronald Aloia, 2012-12-02 Membrane Fluidity in Biology Volume 1 Concepts of Membrane Structure covers membrane properties influenced by alterations in membrane lipid compositions and or other organizational parameters that are encompassed by the term fluidity This book is composed of eight chapters that discuss significance of fluidity changes in both normal and pathological cellular functions This book starts by describing membrane structural organization and composition and arrangement of the molecular components of cell membranes This is followed by discussions on structural properties of lipids and role of nonbilayer lipid structures in membrane fusion The methodological approaches in study of cellular membrane structural diversity and fluid mosaic model for accurate representation of membrane fluidity are also discussed This volume then describes the phenomenon of reversed or negative membrane images as viewed with transmission electron microscope Chapters 6 and 7 explain the interaction of cytochrome P 450 with phospholipids and proteins in the endoplasmic reticulum and steps in the derivation of membrane structure and packing principles Finally the concluding chapter focuses on the membrane of the human red blood cell and presents relatively simple arguments concerning its physical properties The book will serve as a primary source for research scientists and teachers interested in cellular membrane fluidity phenomena
