

Ch. 12 Study Guide

1. How can communicable diseases be prevented?
Through proper handwashing education and testing.
2. Describe the three stages of an HIV infection.
The three stages of human immunodeficiency virus (HIV) include acute HIV infection: develops within 2 to 4 weeks after infection with HIV. During this time, some people have flu-like symptoms, such as fever, headache, and rash. In the acute stage of infection, HIV multiplies rapidly and spreads throughout the body
chronic HIV infection: During this stage, HIV continues to multiply in the body but at very low levels. People with chronic HIV infection may not have any HIV-related symptoms
acquired immune deficiency syndrome: final, most severe stage of HIV infection. Because HIV has severely damaged the immune system, the body cannot fight off opportunistic infections

All of the following are ways HIV can be transmitted except:

- a. HIV-positive mother breastfeeding her infant
 - b. Kidney transplant from an HIV-positive donor
 - c. Drinking from the same cup as an HIV-positive person
 - d. HIV-positive female that delivers a baby via c-section
3. Why are youth at a greater risk for HIV infection?
 4. Which of the following STDs can be cured? (selected all that apply)
 - a. HPV
 - b. Syphilis
 - c. Gonorrhea
 - d. Hepatitis B
 - e. Chlamydia
 5. Explain how gonorrhea can lead to pelvic inflammatory disease (PID) in women.
PID happens when bacteria moves from your vagina and cervix to other parts of your body. It can lead to chronic pain and other serious health problems, like infertility.
 6. Why is tertiary syphilis a bigger concern in developing countries than it is in the United States?

Research Methods for International Human Rights Law Damian Gonzalez-Salzberg,Loveday Hodson,2019-06-13 The study and teaching of international human rights law is dominated by the doctrinal method A wealth of alternative approaches exists but they tend to be discussed in isolation from one another This collection focuses on cross theoretical discussion that brings together an array of different analytical methods and theoretical lenses that can be used for conducting research within the field As such it provides a coherent accessible and diverse account of key theories and methods A distinctive feature of this collection is that it adopts a grounded approach to international human rights law through demonstrating the application of specific research methods to individual case studies By applying the approach under discussion to a concrete case it is possible to better appreciate the multiple understandings of international human rights law that are missed when the field is only comprehended through the doctrinal method Furthermore since every contribution follows the same uniform structure this allows for fruitful comparison between different approaches to the study of our discipline
