Floor Plan Using Geometry Terms:

The Fractal Dimension of Architecture Michael J. Ostwald, Josephine Vaughan, 2016-09-01 Fractal analysis is a method for measuring analysing and comparing the formal or geometric properties of complex objects In this book it is used to investigate eighty five buildings that have been designed by some of the twentieth century s most respected and celebrated architects Including designs by Le Corbusier Eileen Gray Frank Lloyd Wright Robert Venturi Frank Gehry Peter Eisenman Richard Meier and Kazuyo Sejima amongst others this book uses mathematics to analyse arguments and theories about some of the world s most famous designs Starting with 625 reconstructed architectural plans and elevations and including more than 200 specially prepared views of famous buildings this book presents the results of the largest mathematical study ever undertaken into architectural design and the largest single application of fractal analysis presented in any field The data derived from this study is used to test three overarching hypotheses about social stylistic and personal trends in design along with five celebrated arguments about twentieth century architecture Through this process the book offers a unique mathematical insight into the history and theory of design

InnovatiON-Architecture Eduardo Gutiérrez, Jordi Fernández, 2022-01-26 Compiles ON A work philosophy a constant search for innovative ad hoc solutions for each project using the most updated technologies and design research This book exposes and collects the innovations developed through 15 years of work at ON A through lengthy conversations between its founders and directors Eduardo Gutiérrez and Jordi Fernández and the editor This is not a usual monograph but rather an exploration of ideas from an innovation point of view according to four basic criteria Design Laboratory Technology and Emotion With the aim of understanding the different degrees of innovation on how they operate in ON A the book is organized into these four blocks The first one is routed on Design as a starting point to attend the control of the geometry inspired on mineral arboreal and organic shapes and encoding the information using parametric design BIM and coding techniques That methodology allows us to visualize and interact with the continuum of data and workflows of all stages of development attending to the entire life cycle of the project Since ON A considers themselves as a Laboratory rather than as a professional architecture office the second conversation explores our ways of making innovative architecture throughout bioclimatic and sustainable experiments and tests done in their works and projects In that chapter they talk about how to incorporate the green feature through bioarchitecture a layer of technological green that appeals to sustainability from materiality management and maintenance in

order to re naturalize cities and reconnect people with the natural environment in favor of an ecosystem balance Technology is the third chapter a key tool to enhance design and creativity carrying out complete material structural and installation modeling that gives us control of any layout whether we use curved glass precast GRC wood or another innovative material technique to build their projects Last but not least the fourth conversation is about how ON A s projects work as a catalyst for creating positive Emotions physical visual well being and comfort that contribute occupants health and flexible usability of the designed spaces As a result of these four conversations the book shows how to innovate in architecture from different layers with only one concern helping to reduce the environmental impact of human intervention improving citizens quality of life and seeking the emotional interactions between the inhabitants and their environment *English for Planning and Building Professionals* Sharon Heidenreich,2023-03-28 This language course book provides the tools to communicate effectively throughout the development of construction projects It includes the most important vocabulary grammar and expressions for the successful collaboration in English speaking planning teams The 16 chapters are organised according to the planning phases of a project introducing essential vocabulary from the brief and feasibility study through to the completion and acceptance of a scheme The planning and development of a single family home provides a framework to practise business skills such as telephoning writing emails and negotiating Important grammar structures have been included to offer readers the opportunity to refresh and practise elements appropriate to the phase of construction In addition to the book contents readers have access not only to audios by scanning the QR codes at the conversations but also the Springer Nature Flashcards App which can be downloaded free of charge to learn vocabulary more effectively with 320 digital flashcards According to the Common European Framework of Reference for Languages the level of this book is B2 C1

Buchwald,2024-10-28 Using detailed analyses of individual buildings as a point of departure Professor Buchwald here examines various approaches to Byzantine architectural forms and raises questions concerning the use of stylistic and other forms of analysis One group of articles focuses on stylistic currents in Asia Minor including that of the 13th century Lascarid dynasty previously unknown Others explore methods which appear to have been used in the design of Byzantine churches such as dimensional rules of thumb modular and geometric systems of proportion and the quadratura hitherto recognised only in Western architecture The final essays pose further questions what were the goals and achievements of Byzantine architects when they transformed older existing buildings How and why did they use stereometric Euclidean geometry And was there any ultimately Platonic connection

Data Management and Security A. Bia,2013 Containing the papers presented at the first International Conference on Data Management and Security with applications in Medicine Sciences and Engineering this book focuses on the modern techniques applied in data management and knowledge acquisition with applications in a broad variety of fields It also discusses recent developments in data security systems Papers in the book cover such topics as Data and text mining Ubiquitous devices Numerical modelling Expert systems Databases Cloud computing Sensors and optechtronics Heuristic methods and genetic algorithms Knowledge discovery Prediction modelling Data streaming Clustering Decision support systems Cryptography Information and codification Engineering Applications
