Measure	Definition	Formula	Interpretation	Limitations
Mean	The average value of the data set.	$\bar{x} = \frac{\sum x_i}{n}$	Represents the central tendency of the data.	Sensitive to outliers.
Median	The middle value of the data set when arranged in ascending order.	$\text{Median} = \frac{n+1}{2}^{\text{th}} \text{ value}$	Represents the central tendency of the data.	Not sensitive to outliers.
Mode	The value that appears most frequently in the data set.	$\text{Mode} = \text{Most frequent value}$	Represents the central tendency of the data.	Not unique; can be multiple.
Range	The difference between the maximum and minimum values.	$\text{Range} = \text{Max} - \text{Min}$	Represents the spread of the data.	Not sensitive to outliers.
Variance	The average of the squared deviations from the mean.	$s^2 = \frac{\sum (x_i - \bar{x})^2}{n}$	Represents the spread of the data.	Sensitive to outliers.
Standard Deviation	The square root of the variance.	$s = \sqrt{s^2}$	Represents the spread of the data.	Sensitive to outliers.
Skewness	The measure of the asymmetry of the data distribution.	$\text{Skewness} = \frac{\sum (x_i - \bar{x})^3}{n}$	Represents the asymmetry of the data.	Sensitive to outliers.
Kurtosis	The measure of the "tailedness" of the data distribution.	$\text{Kurtosis} = \frac{\sum (x_i - \bar{x})^4}{n}$	Represents the "tailedness" of the data.	Sensitive to outliers.

STATISTICS

Measures of Dispersion/Spread

Range

Calculated by taking the difference between the largest and smallest values

Calculated as follows: $(\text{Largest} - \text{Smallest})$

$(100 - 10) = 90$

- It gives information about the spread of the data
- It can be sensitive to outliers (values that are far away from the rest of the data)

Range: $(\text{Largest} - \text{Smallest}) = 90$ → It tells about overall dispersion of the data (range of values)

Interquartile Range

Calculated as follows:

- Order the data
- Find the median (middle value) and the median of the lower half and the median of the upper half
- Subtract the median of the lower half from the median of the upper half
- Result is called interquartile range (IQR)
- It tells about the spread of the middle 50% of the data

Calculated as follows:

$$IQR = Q3 - Q1$$

$IQR = 70 - 30 = 40$

[illegible]

Median Class = class with the highest frequency

Median
 Discrete data: $x = \frac{n+1}{2}$ th value
 Continuous data (with frequency): $\frac{n+1}{2}$ th value

To estimate median from grouped data:

- Find cumulative frequency of first column until you get to $\frac{n+1}{2}$ th value and
- Find the class interval with the median
- Find how many more values you need to get to get the median.
- Divide that number by the freq. for that class
- Multiply that answer by the class width
- Add your answer to the lower bound for the class interval

Estimated median: $x = \frac{n+1}{2}$ th value

- Find the class interval for the estimated median
- x is the number of values
- Find the number of values of the class interval that are less than the median
- Find the number of the values less than the median
- Find the width of the class interval

Mean:
 Discrete data: $\bar{x} = \frac{\sum fx}{n}$ $\bar{x}$ = sum of all values
 n = number of values

Continuous data: $\bar{x} = \frac{\sum fxc}{n}$ f = frequency
 c = first column (midpoints for grouped data)

Weighted Mean: $\bar{x}$ for data that has different number of values or weights for each group

Weighted Mean: $\bar{x} = \frac{\sum fx}{\sum f}$

Geometric Mean: $\bar{x} = \sqrt[n]{x_1 \cdot x_2 \cdot \dots \cdot x_n}$

Gcse Statistics Revision Guide For Dummies

Michal Rosen-Zvi

Gcse Statistics Revision Guide For Dummies:

GCSE Statistics Vocabulary Workbook Lewis Morris, Learn the Secret to Success on the GCSE Statistics Exam Ever wonder why learning comes so easily to some people This remarkable workbook reveals a system that shows you how to learn faster easier and without frustration By mastering the hidden language of the subject and exams you will be poised to tackle the toughest of questions with ease We ve discovered that the key to success on the GCSE Statistics Exam lies with mastering the Insider s Language of the subject People who score high on their exams have a strong working vocabulary in the subject tested They know how to decode the vocabulary of the subject and use this as a model for test success People with a strong Insider s Language consistently Perform better on their Exams Learn faster and retain more information Feel more confident in their courses Perform better in upper level courses Gain more satisfaction in learning The GCSE Statistics Exam Vocabulary Workbook is different from traditional review books because it focuses on the exam s Insider s Language It is an outstanding supplement to a traditional review program It helps your preparation for the exam become easier and more efficient The strategies puzzles and questions give you enough exposure to the Insider Language to use it with confidence and make it part of your long term memory The GCSE Statistics Exam Vocabulary Workbook is an awesome tool to use before a course of study as it will help you develop a strong working Insider s Language before you even begin your review Learn the Secret to Success After nearly 20 years of teaching Lewis Morris discovered a startling fact Most students didn t struggle with the subject they struggled with the language It was never about brains or ability His students simply didn t have the knowledge of the specific language needed to succeed Through experimentation and research he discovered that for any subject there was a list of essential words that when mastered unlocked a student s ability to progress in the subject Lewis called this set of vocabulary the Insider s Words When he applied these Insider s Words the results were incredible His students began to learn with ease He was on his way to developing the landmark series of workbooks and applications to teach this Insider s Language to students around the world
