Planning and Design for Sustainable Urban Mobility Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the

most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner. However, a number of challenges faced by urban transport systems such as greenhouse gas emissions, noise, and air pollution, and road traffic accidents do not necessarily get solved by the construction of new infrastructure. Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of transportation and mobility is to gain access to destinations, activities, services, and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land use and transport planning. This new report of the United Nations Human Settlements Programme (UN Habitat), the world's leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems. The Global Report on Human Settlements is the most authoritative and up-to-date global assessment of human settlements conditions and trends. Preceding issues of the report have addressed such topics as Cities in a Globalizing World, The Challenge of Slums, Financing Urban Shelter, Enhancing Urban Safety and Security, Planning Sustainable Cities, and Cities and Climate Change.

Rare Earth Frontiers Julie M. Klinger, 2018-01-15. Rare Earth Frontiers is a work of human geography that serves to demystify the powerful elements that make possible the miniaturization of electronics, green energy, and medical technologies, and essential telecommunications and defense systems. Julie Michelle Klinger draws attention to the fact that the rare earths we rely on most are as common as copper or lead, and this means the implications of their extraction are global. Klinger excavates the rich historical origins and ongoing ramifications of the quest to mine rare earths in ever more impossible places. Klinger writes about the devastating damage to lives and the environment caused by the exploitation of rare earths. She demonstrates in human terms how scarcity myths have been conscripted into diverse geopolitical campaigns that use rare earth mining as a pretext to capture spaces that have historically fallen beyond the grasp of centralized power. These include legally and logistically forbidding locations in the Amazon, Greenland, and Afghanistan, and on the Moon. Drawing on ethnographic archival and interview data gathered in local languages and offering possible solutions to the problems it documents, this book examines the production of the rare earth frontier as a place, a concept, and a zone of contestation, sacrifice, and transformation.

Critical Issues in Contemporary China Czeslaw Tubilewicz, 2016-12-12. While presenting contending explanatory approaches, contributors advance arguments to further critical discussion on selected topics. Main issues analysed include political change, military transformation, legal reforms, economic development, energy security, environmental degradation, food security and safety, demographic trends, migration and urbanization, labour unrest, health and education, social inequalities, ethnic conflicts, Hong Kong's integration, cross Strait relations. Education in a Digital World Neil Selwyn, 2013. Drawing on a wealth of theoretical and empirical work, *Education in a Digital World* tackles a number of pressing questions such as: how are global trends in educational technology refracted through national policies and processes? How exactly are educational technologies linked to issues of global economics and the fortunes of national and international economies? To what extent are digital technologies implicated in the commercialisation, marketization and commodification of education? These questions and others are addressed throughout eight wide-ranging chapters which consider topics such as the national policy strategies of countries across North and South America, Europe and East Asia; the educational technology portfolios of international organizations such as the United Nations and Microsoft; as well as the role of education and technology in international development and the on-going efforts to provide one laptop per child across low income regions and countries. Through these examples, Selwyn develops a detailed analysis of education technology and globalisation, drawing together arguments and debates from various academic perspectives. Written in a detailed but accessible manner, this is an essential book for anyone wishing to gain a better understanding of the role of education and technology in contemporary globalised society.
