From the formulas defining each factor F (see, for instance, Fig. 1), we can see that the corresponding parameters have constant positive values. It is not the parameters α and β that are constant, but the values of the functions $\alpha(t)$ and $\beta(t)$ that are constant. It is obvious that the values of the functions $\alpha(t)$ and $\beta(t)$ are constant for all values of t and for all values of F .
