Reitano, 2010-01-29 An introduction to many mathematical topics applicable to quantitative finance that teaches how to think in mathematics rather than simply do mathematics by rote This text offers an accessible yet rigorous development of many of the fields of mathematics necessary for success in investment and quantitative finance covering topics applicable to portfolio theory investment banking option pricing investment and insurance risk management The approach emphasizes the mathematical framework provided by each mathematical discipline and the application of each framework to the solution of finance problems It emphasizes the thought process and mathematical approach taken to develop each result instead of the memorization of formulas to be applied or misapplied automatically The objective is to provide a deep level of understanding of the relevant mathematical theory and tools that can then be effectively used in practice to teach students how to think in mathematics rather than simply to do mathematics by rote Each chapter covers an area of mathematics such as mathematical logic Euclidean and other spaces set theory and topology sequences and series probability theory and calculus in each case presenting only material that is most important and relevant for quantitative finance Each chapter includes finance applications that demonstrate the relevance of the material presented Problem sets are offered on both the mathematical theory and the finance applications sections of each chapter The logical organization of the book and the judicious selection of topics make the text customizable for a number of courses The development is self contained and carefully explained to support disciplined independent study as well A solutions manual for students provides solutions to the book s Practice Exercises an instructor s manual offers solutions to the Assignment Exercises as well as other materials      Introduction to Linear Algebra Lee W. Johnson, R. Dean Reiss, Jimmy T. Arnold, 2000-07-01      **Discrete Mathematics For Teachers** Ed Wheeler, Jim Brawner, 2010-06-01 Originally Published by Houghton Mifflin Company 2004 There is a national consensus that teachers who teach middle grades and elementary mathematics need deeper and broader exposure to mathematics in both their undergraduate and in their graduate studies The Mathematics Education of Teachers published by The Conference Board on the Mathematical Sciences recommends 21 semester hours of mathematics for prospective teachers of middle grades mathematics In several states pre service teachers preparing to teach middle grades mathematics and pre service teachers preparing to teach elementary school must complete 6 9 semester hours of mathematics content at the junior senior level Graduate schools across the nation have developed special programs for educators who specialize in teaching mathematics to elementary school children and to middle grades students However there is a paucity of text materials to support those efforts at junior senior level and graduate level courses Faculty members must choose to teach yet another course out of one of the Mathematics for Teachers texts that have formed the basis of the curriculum for the last two decades These texts tend to treat a very limited set of topics on a somewhat superficial level Alternatively faculty members can use mathematics textbooks written primarily for students majoring in mathematics or the sciences Neither the topic choice nor the pedagogical style of these texts is optimal

for pre service and in service teachers of middle grades and elementary mathematics Discrete Mathematics for Teachers is a text designed to fill this void The topic is right Discrete mathematics provides a rich and varied source of problems for exploration and communication expands knowledge of mathematics in directions related to elementary and middle school curricula and is easily presented using our best understanding of the ways that mathematics is learned and taught The presentation is right In the spirit of NCTM s Principles and Standards for School Mathematics topics are presented with careful attention to the best traditions of problem solving reasoning and proof communication connections with other disciplines and other areas of mathematics and varied modes of representation
