Persistent Forecasting of Disruptive Technologies National Research Council, Division on Engineering and Physical Sciences, Committee on Forecasting Future Disruptive Technologies, 2010-01-15 Technological innovations are key causal agents of surprise and disruption In the recent past the United States military has

encountered unexpected challenges in the battlefield due in part to the adversary's incorporation of technologies not traditionally associated with weaponry. Recognizing the need to broaden the scope of current technology forecasting efforts, the Office of the Director Defense Research and Engineering (DDRE) and the Defense Intelligence Agency (DIA) tasked the Committee for Forecasting Future Disruptive Technologies with providing guidance and insight on how to build a persistent forecasting system to predict, analyze, and reduce the impact of the most dramatically disruptive technologies. The first of two reports in this volume analyzes existing forecasting methods and processes. It then outlines the necessary characteristics of a comprehensive forecasting system that integrates data from diverse sources to identify potentially game-changing technological innovations and facilitates informed decision making by policymakers. The committee's goal was to help the reader understand current forecasting methodologies, the nature of disruptive technologies, and the characteristics of a persistent forecasting system for disruptive technology. *Persistent Forecasting of Disruptive Technologies* is a useful text for the Department of Defense, Homeland Security, the Intelligence community, and other defense agencies across the nation.

Wireless Independent Living for a Greying Population Lara Srivastava, 2022-09-01 It is widely known today that not only are the aged ageing or the old getting older, but they are also increasing in number the world over. At the same time, proper care and support for our aged is increasingly at risk. Without some form of support, the quantitative extension of life cannot be matched by a qualitative one. This may mean that the opportunity provided by a longer life is squandered, and life itself, of course, is nothing if not opportunity. Societies find that self-sufficiency and independence not only contribute to individual well-being but are also economically desirable due to the resultant increase in productivity. The challenges of daily living for a growing population of the aged form the basis of the independent living platform, the AGE HOME platform, which is described in this book. The platform combines both existing and emerging technologies suitable for the home. Its use and application is considered in the wider context of Web 2.0, the Internet of Things, and other elements of the burgeoning digital world. It is time that a holistic and multi-disciplinary approach to this constantly enlarging area of human existence is taken. This book is written for researchers and designers of wireless tools, analog and digital circuits, as well as academics who are active in the various fields of Human Sciences. Foreword: This book appears at the right moment when several developments have made age and its consequences an important element of human existence. It makes for informative reading, being based on considerations related to independence for the aged and the application of emerging technologies to enhance this independence. From the foreword by Houlin Zhao, Deputy Secretary General of the International Telecommunication Union.
