*The British National Bibliography* Arthur James Wells,2006      Java by Abstraction Hamzeh Roumani,2011-03 For any computer science instructor who has lost first year students to boredom or frustration Java by Abstraction A Client View Approach comes as a welcome breath of fresh air an introduction to Java programming that encourages students to build interesting applications from its first page Instead of following the conventional approach to CSE Roumani presents the fundamentals of object oriented programming through an objects first model It s like learning to drive a car before opening the hood and examining the engine a way to show students that with just a little practice they can program in Java with ease Intended for use in a first course in object oriented programming in undergraduate computer science or computer engineering programs this book helps students develop system thinking and a deeper understanding of the underlying concepts of Java programming By urging students to build meaningful apps from the beginning this innovative approach engages them more effectively and quickly

**Data Abstraction and Problem Solving with Java** Frank M. Carrano,Janet J. Prichard,2006 The second edition in Java of the classic Walls and Mirrors approach to programming designs solutions to problems using both data abstraction the walls and recursion the Mirrors Data Abstraction and Problem Solving with Java Walls and Mirrors 2eprovides a focus on the important concepts of data abstraction and data structures in a way that beginning programmers find accessible The first part of the book covers problem solving techniques including a review of Java fundamentals principles of programming and software engineering recursion and data abstraction and linked lists Later chapters focus on problem solving with abstract data types including stacks queues algorithm efficiency and sorting trees and graphs This edition contains enhanced material on OO implementation MARKET Readers searching for problem solving solutions through abstraction algorithmic refinement data structures and recursion

Data Abstraction and Problem Solving with Java Frank M. Carrano,Janet J. Prichard,2001 This work focuses on the important concepts of data abstraction and data structures It also introduces students to java classes along with other basic concepts of object oriented programming including inheritance polymorphism interfaces and packages

*Data Abstraction and Problem Solving with Java* Janet J. Prichard, Frank M. Carrano,2011 Data Abstraction and Problem Solving in C and is now updated to the Java programming language It uses the running theme of Walls and Mirrors to help make clear the challenging concepts of recursion the mirrors and data abstraction the walls Authors Carrano and Prichard cover key object oriented concepts including encapsulation inheritance and polymorphism However the focus of the book remains on data abstraction instead of simply Java syntax

Data Structures and Abstractions with Java Frank M. Carrano,2007 This book Includes generic data types as well as enumerations for each loops the interface Iterable the class Scanner assert statements and autoboxing and unboxing Amazon

Program Development in Java Barbara Liskov,John Guttag,2000-06-06 Written by a world renowned expert on programming methodology and the winner of the 2008 Turing Award this book shows how to build production

quality programs programs that are reliable easy to maintain and quick to modify Its emphasis is on modular program construction how to get the modules right and how to organize a program as a collection of modules The book presents a methodology effective for either an individual programmer who may be writing a small program or a single module in a larger one or a software engineer who may be part of a team developing a complex program comprised of many modules Both audiences will acquire a solid foundation for object oriented program design and component based software development from this methodology Because each module in a program corresponds to an abstraction such as a collection of documents or a routine to search the collection for documents of interest the book first explains the kinds of abstractions most useful to programmers procedures iteration abstractions and most critically data abstractions Indeed the author treats data abstraction as the central paradigm in object oriented program design and implementation The author also shows with numerous examples how to develop informal specifications that define these abstractions specifications that describe what the modules do and then discusses how to implement the modules so that they do what they are supposed to do with acceptable performance Other topics discussed include Encapsulation and the need for an implementation to provide the behavior defined by the specification Tradeoffs between simplicity and performance Techniques to help readers of code understand and reason about it focusing on such properties as rep invariants and abstraction functions Type hierarchy and its use in defining families of related data abstractions Debugging testing and requirements analysis Program design as a top down iterative process and design patterns The Java programming language is used for the book s examples However the techniques presented are language independent and an introduction to key Java concepts is included for programmers who may not be familiar with the language
