Materials for Architects and Builders Arthur Lyons, 2010-08-31 A necessary purchase for level 1 and 2 undergraduates studying building construction materials modules Materials for Architects and Builders provides an introduction to the broad range of materials used within the construction industry and contains information pertaining to their manufacture key physical properties specification and uses Construction Materials is a core module on all undergraduate and diploma construction related courses and this established textbook is illustrated in colour throughout with many photographs and diagrams to help students understand the key principles This new edition has been completely revised and updated to include the latest developments in materials appropriate technologies and relevant legislation The current concern for the ecological effects of building construction and lifetime use are reflected in the emphasis given to sustainability and recycling An additional chapter on sustainability and governmental carbon targets reinforces this issue      **Metric Handbook** David A. Adler, 1998-12-01 A time saving device intended for designers and architects The CD uses illustrations from the 1998 edition of the Metric handbook to provide CAD drawings information and tools The illustrations are suitable for AutoCAD R11 R12 R13 and will work using AUtodesk and similar CAD systems      **The Democratic Courthouse** Linda Mulcahy, Emma Rowden, 2019-09-20 The Democratic Courthouse examines how changing understandings of the relationship between government and the governed came to be reflected in the buildings designed to house the modern legal system from the 1970s to the present day in England and Wales The book explores the extent to which egalitarian ideals and the pursuit of new social and economic rights altered existing hierarchies and expectations about how people should interact with each other in the courthouse Drawing on extensive public archives and private archives kept by the Ministry of Justice but also using case studies from other jurisdictions the book details how civil servants judges lawyers architects engineers and security experts have talked about courthouses and the people that populate them In doing so it uncovers a changing history of ideas about how the competing goals of transparency majesty participation security fairness and authority have been achieved and the extent to which aspirations towards equality and participation have been realised in physical form As this book demonstrates the power of architecture to frame attitudes and expectations of the justice system is much more than an aesthetic or theoretical nicety Legal subjects live in a world in which the configuration of space the cues provided about behaviour by the built form and the way in which justice is symbolised play a crucial but largely unacknowledged role in creating meaning and constituting legal identities and rights to participate in the civic sphere Key to understanding the modern day courthouse this book will be of interest to scholars and students in all fields of law architecture sociology political science psychology and criminology      *Construction and Detailing for Interior Design Second Edition* Drew Plunkett, 2015-08-21 Construction and detailing are vital skills for all students studying interior design and architecture This book is structured to encourage a diversity of techniques allowing each student the means to find and put into practice the appropriate solution to fabrication issues and also to express their own personal aesthetic The relation of existing building

shells to the construction and detailing of new elements is also explored Practical tips are given throughout the book the roles of consultants manufacturers suppliers and fabricators are explained and theories of modern sustainable approaches to interior detailing are discussed The chapters are packed with professional annotated drawings and explanatory photographs of techniques materials and tools Through these the principles of sound construction are explained This second edition includes revised diagrams to increase clarity more on sustainability and more on services and lighting

Spaces in Architecture Bert Bielefeld, 2019-04-01 The design of a building is a complex process in which the architect develops spaces which are defined by a number of different parameters The most important of these are space requirements distances furniture and fittings and movement zones From the dimensions of the human body it is possible to derive guide values for these reference sizes that make spaces comfortable to be in and to use Spaces in Architecture is a useful reference work for students and designers for quickly looking up detailed information on space scenarios that occur in many different types of buildings For example the book lists all important dimensions for entrance areas doors staircases ramps and elevators On the basis of this fundamental information it is possible to design buildings in terms of function and type
