a high power mode locked thin disk oscillator and to compress the pulses emitted from this laser to durations of only a few
optical cycles Moreover the monograph introduces several methods to achieve power scalability of compression and
stabilization techniques All experimental approaches are compared in detail and may serve as a guideline for developing high
power waveform controlled few cycle light sources which offer tremendous potential to exploit extreme nonlinear optical
effects at unprecedentedly high repetition rates and to establish table top infrared light sources with a unique combination of
brilliance and bandwidth As an example the realization of a multi Watt multi octave spanning mid infrared femtosecond
source is described The thesis starts with a basic introduction to the field of ultrafast laser oscillators It subsequently
presents additional details of previously published research results and establishes a connection between them It therefore
