Concentric Squares and Right Triangles

Right Triangle Patterns

Just as a classical architect has created a building with a single geometric pattern, the mathematician has created these designs. Each design uses three basic parts: the square, the right triangle, and the hypotenuse. These three elements make up the three triangles that form concentric squares. The squares that surround the central square. These are the patterns. What does it mean that these are concentric?

Now examine Figure 10.10, and then answer the questions.

1. Show that the four right triangles that surround the central square are congruent using the Hypotenuse-Leg Theorem.
These triangles are right triangles because the central square is a square and the sides of the square are equal. The legs of the four triangles are the sides of the square, and the hypotenuses are the sides of the square. The Hypotenuse-Leg Theorem states that if the hypotenuse and one leg of a right triangle are congruent to the hypotenuse and one leg of another right triangle, then the two triangles are congruent.
2. Show that the four right triangles that surround the central square are congruent using the Hypotenuse-Leg Theorem. In this case, the hypotenuses are the sides of the square, and the legs are the sides of the square. The Hypotenuse-Leg Theorem states that if the hypotenuse and one leg of a right triangle are congruent to the hypotenuse and one leg of another right triangle, then the two triangles are congruent.
3. Show that the four right triangles that surround the central square are congruent using the Hypotenuse-Leg Theorem. In this case, the hypotenuses are the sides of the square, and the legs are the sides of the square. The Hypotenuse-Leg Theorem states that if the hypotenuse and one leg of a right triangle are congruent to the hypotenuse and one leg of another right triangle, then the two triangles are congruent.
4. Show that the four right triangles that surround the central square are congruent using the Hypotenuse-Leg Theorem. In this case, the hypotenuses are the sides of the square, and the legs are the sides of the square. The Hypotenuse-Leg Theorem states that if the hypotenuse and one leg of a right triangle are congruent to the hypotenuse and one leg of another right triangle, then the two triangles are congruent.
