

Example 6: The design layout of a hyperbolic cooling tower is shown below. The tower stands 179.6 meters tall. The diameter of the top is 72 meters. At their closest, the sides of the tower are 40 meters apart. Find the equation of the hyperbola that models the sides of the cooling tower. Assume that the center of the hyperbola is the origin of the coordinate plane. Round final values to 4 decimal places.

$$a = 90 \quad x^2 - y^2$$

$$\frac{x^2}{900} - \frac{y^2}{b^2} = 1$$

$$\frac{(36)^2}{900} - \frac{(79.6)^2}{b^2} = 1$$

Problem from Pythagoras to Hawking Mauri Valtonen,Joanna Anosova,Konstantin Kholoshevnikov,Aleksandr Mylläri,Victor Orlov,Kiyotaka Tanikawa,2016-05-03 This book written for a general readership reviews and explains the three body problem in historical context reaching to latest developments in computational physics and gravitation theory The three body problem is one of the oldest problems in science and it is most relevant even in today s physics and astronomy The long history of the

problem from Pythagoras to Hawking parallels the evolution of ideas about our physical universe with a particular emphasis on understanding gravity and how it operates between astronomical bodies The oldest astronomical three body problem is the question how and when the moon and the sun line up with the earth to produce eclipses Once the universal gravitation was discovered by Newton it became immediately a problem to understand why these three bodies form a stable system in spite of the pull exerted from one to the other In fact it was a big question whether this system is stable at all in the long run Leading mathematicians attacked this problem over more than two centuries without arriving at a definite answer The introduction of computers in the last half a century has revolutionized the study now many answers have been found while new questions about the three body problem have sprung up One of the most recent developments has been in the treatment of the problem in Einstein s General Relativity the new theory of gravitation which is an improvement on Newton s theory Now it is possible to solve the problem for three black holes and to test one of the most fundamental theorems of black hole physics the no hair theorem due to Hawking and his co workers
